2025-07-17 22:05:41

is a powerful tool for integrating document viewing and conversion capabilities into your ASP.NET applications or websites. It supports more than 70 file formats, including common types like PDFs and Microsoft Office documents, allowing users to access a wide range of files seamlessly. The viewer is based on HTML5, meaning it works smoothly on desktop and mobile browsers, providing a responsive and high-resolution experience that maintains the original text and graphics quality.

This document viewer is designed for efficiency and ease of use. It loads pages dynamically as you view them, ensuring fast access without needing to load the entire document simultaneously. Users can easily search within documents, navigate using bookmarks, and switch between different page layouts, such as single-page or facing pages. Additionally, security features like encryption protect the content, and there are options to disable the downloading, printing, or copying of documents to safeguard sensitive information.

GleamTech DocumentUltimate is also customizable and easy to deploy. It includes features like watermarking, where custom text or image watermarks can be added to your documents. The tool supports a broad range of formats for both viewing and conversion, making it versatile for various document management needs. Deployment is hassle-free with a single managed DLL that works on both 32-bit and 64-bit systems without requiring additional software like Microsoft Office on the server.
