Devart dbExpress driver for PostgreSQL v4.2.1 (09 Jun 2020) for D10.4 Sydney

2026-10-09 16:09:47

DbExpress Driver for PostgreSQL is a database-independent coating that defines a common interface to provide rapid access to PostgreSQL from Delphi and C++Builder such as Community Edition on Windows along with macOS. With this particular server, dbExpress provides a motorist as an independent library that implements the frequent dbExpress port for processing queries and stored procedures. As the data-access coating is thin and simple, dbExpress offers high-performance database connectivity and is easy to deploy.

DbExpress is a database-independent coating that defines a common interface to provide rapid access to PostgreSQL from **Delphi** and **C++Builder**, such as Community Edition, on Windows and macOS (32-bit and 64-bit) and Linux (64-bit) platforms. With this particular server, dbExpress provides a motorist as an independent library that implements the frequent dbExpress port for processing queries and stored procedures. As the data-access coating is thin and simple, dbExpress offers high-performance database connectivity and is easy to deploy. You may use our driver in precisely the same manner as the one provided by Embarcadero.

DbExpress driver for PostgreSQL offers direct high-performance access to the PostgreSQL database. It directly connects to the host without using the PostgreSQL client program.
