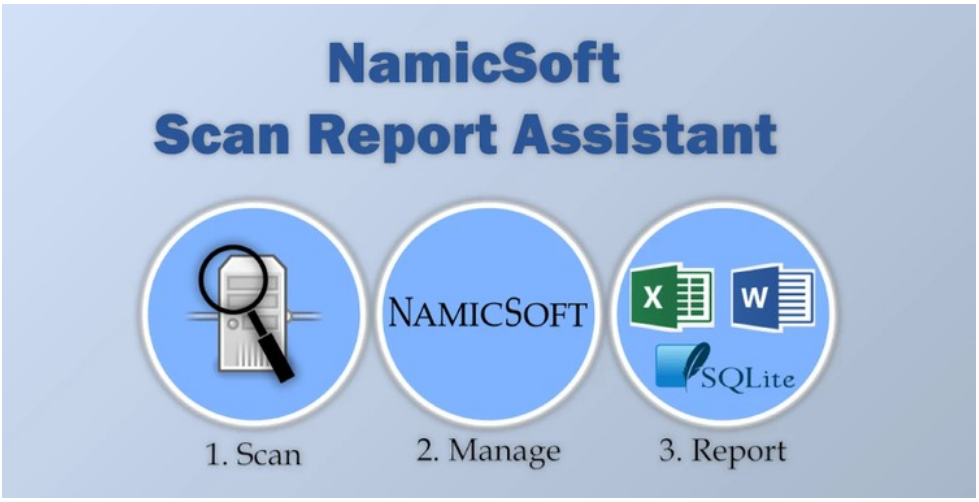
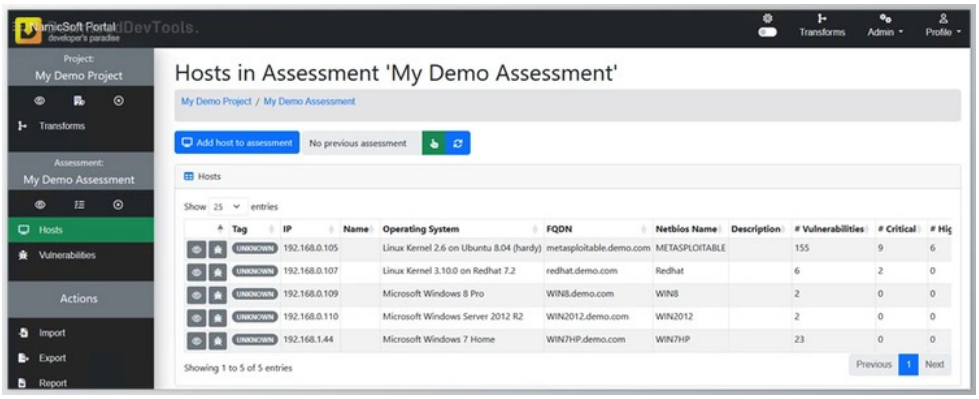
NamicSoft Scan Report Assistant v3.0.24.0

2025-03-09 23:17:52





presents security professionals with two important solutions: NamicSoft Portal and NamicSoft Scan Report Assistant. The modern NamicSoft Portal is a team-oriented web-based platform enabling group vulnerability management between Windows, Linux, and macOS systems. The software solution does not require the installation of extra web servers or databases, so any user can efficiently deploy and operate it. NamicSoft Portal stands out through its enhanced capability to analyze vulnerabilities by offering assessment comparison and security tool integration, which delivers a smooth management system.

As a Windows desktop application, **NamicSoft Scan Report Assistant** Scan Report Assistant helps individual users handle their vulnerability reporting tasks efficiently. The application turns unprocessed scan data into professional Word reports through built-in or user-modified template resources. The tool's CSV and SQLite export functions enable users to handle their findings through efficient, structured management tools easily. This tool delivers a dependable, simple reporting system to security analysts who must generate professional scan report structures from their analysis outputs.

The tools Burp Suite, Nmap OWASP ZAP and Tenable Nessus, among others, can be supported by both solutions. Users require a web-based collaborative tool or a Windows application from NamicSoft that enhances their vulnerability management process with better efficiency and usability.

Key Features of **NamicSoft Scan Report Assistant** :

1. **Create Word Reports** – Generate polished, professional Word reports using built-in or custom templates.
2. **Export to CSV** – Easily transfer data to CSV format for further analysis with external tools or scripts.
3. **Export to SQLite Database** – Save scan data into a file, enabling custom queries and deeper analysis.
4. **Compare Assessments** – Identify new vulnerabilities or changes in security posture by comparing different scan results.
5. **Multi-User Collaboration** – NamicSoft Portal allows teams to work together on real-time vulnerability management.
6. **Cross-Platform Compatibility** – Use NamicSoft Portal on Windows, Linux, and macOS without extra setup.
7. **Self-Contained Application** – No need for additional web servers or databases—install and start using.
8. **Supports Multiple Security Tools** – Import scan results from leading tools like Burp Suite, Nmap, OpenVAS, OWASP ZAP, Rapid7 Nexpose, Tenable Nessus, and more.
