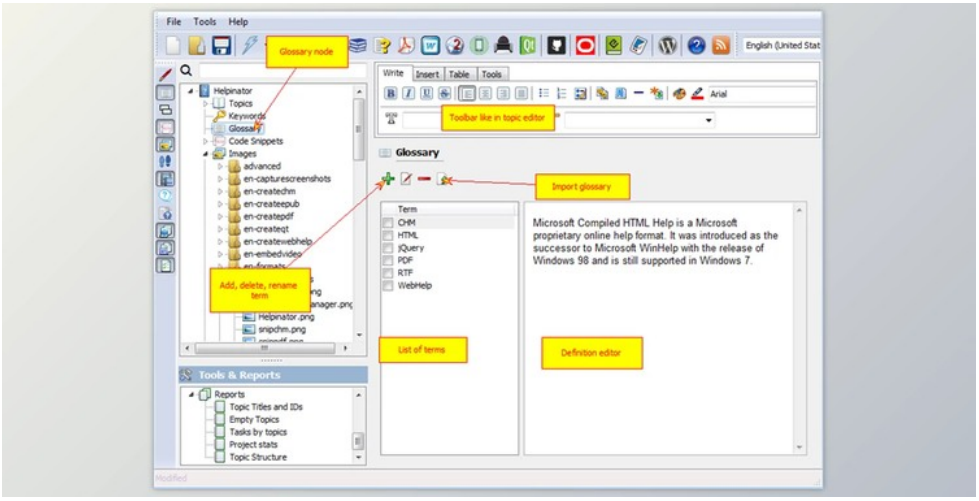
Helpinator v3.24.1 Professional Multilingual

2025-02-26 13:11:04



Helpinator is a reliable and useful tool that allows you to create, modify and compile support files compatible with a huge chain of applications. The program is user-friendly and provides you a broad array of applications for text editing, image embedding, or linking URLs. Also, you might save the results in numerous formats.

Quickly produce user manuals and online documentation for desktop, mobile, and internet programs.

Helpinator is a helpful program, particularly regarding fast developing a Help file to get a plan in evolution. Its thorough interface is split so you can get the tree structure on the other hand and simplify or append it with helpful tools. The principal place on the right is where you can create the desired changes.

Helpinator is a what-you-see-is-what-you-get editor, letting you utilize many picture components. It includes several built-in templates that you may personalize to fit your needs, but you may readily create a new one with this HTML template builder's assistance. The screenshot tutorial and tool manufacturer are made to assist you in inserting extensive content on your Help file.

Helpinator permits you to make specific Help documents for a massive chain of applications and allows you to compile all too many formats. The program supports producing general Help documents in CHM format and specific programs: QtHelp, Major Mind, Java, Oracle, or even helpful.

You may also save the job in many formats, including PDF, RTF, Internet help, EPUB, or even MOBI. As an alternative, you can immediately print it into WordPress. Particular sorts of Help files have to be made in particular templates, such as those for Important Mind, Oracle, or even helpful.

Helpinator also lets you publish the new job directly from its own interface. Also, you can save yourself the undergoing work to some.HPZ document, which you may import anytime you would like to make adjustments. The app can recall the most recently opened files and allows you to keep your job without checking-in on the whole project each moment.

Helpinator Great Features:

WYSIWYG editor, you don't have to know HTML or another markup language—built-in content components such as data, code snippets, incremental manuals, videos, FAQs, and quizzes.

Supports a lot of outputs, such as Markdown, DocBook, and DITA.

Shop all languages in 1 project file. You don't have to keep separate jobs for each language your job affirms.

Has quite a few built-in tools such as screenshot capture, tutorial manufacturer, FAQ and Quiz manufacturers, GIF recorder, and much more.

HTML-based help system originally designed to substitute CHM as context-sensitive assistance. It can also exhibit any HTML-based output signal, including delivered by webservers and SimpleDocServer, and utilize it to get context-sensitive help.

Lightweight non-HTML aid system. Less versatile as HTML-based aid systems but with assistance for content bits provided from Helpinator: characters, incremental manuals, videos, asides, FAQs, Quizzes, and Glossaries.

SimpleDocServer is an easy markdown-based webserver for instruction. You can produce markdown files in almost any text editor; however, Helpinator makes it increasingly simple. It's possible to utilize SimpleDocServer as a supply of context-sensitive aid for MajorMindHelp and enable your users to see documentation through any internet browser in precisely the same moment.

Tools Applications

CHM (Microsoft HTML Help) has been the hottest help file format and remains a de-facto standard despite its issues.

PDF has become the most popular format for consumer manuals.

WebHelp permits you to print product documentation into a site. Has tree of themes, keywords search and list.

Knowledge base output signal is near WebHelp but has distinct content organization - subjects are grouped into classes. Rather than a tree, there is an index page with categories and themes listed.

WordPress is the top CMS nowadays, and Helpinator allows you to publish content directly to it and use it to get context-sensitive aid via MajorMindHelpViewer. We supply a plugin that speeds up publishing and two extra documentation topics for WordPress.

It is possible to make readme easily. MD, GitHub webpages website, or GitHub wiki.

ReadTheDocs.io is a great service to offer online documentation for your customers. Helpinator allows making reStructuredText job which it is possible to publish to this support.

asciidoc/ASCIIDoctor includes a lot of features and lets you create very pleasant docs.

Leanpub is an increasing and evolving service that allows writers to print and market their own books on paper and in e-book form. You can create a LeanPub manuscript from your own job and print it.

DITA is a super-advanced XML-based method to make technical documentation of all kinds. Helpinator allows producing a subset of DITA, which is sufficient to make software documentation out of it.

DocBook is just another XML-based system like DITA in attributes but somewhat bloated.

EPUB and MOBI are popular ebook formats for pocket readers.

QtHelp is Qt frame native aid system.

JavaHelp is Java native aid system.

OracleHelp has been Oracle's own help program with variants for Java and Internet.
