

SQL Database Studio Pro v3.6.2

2025-03-01 20:13:39

SQL Database Studio (SDS) excels because of its attention to detail. SDS automates repetitive tasks like filtering, sorting, and searching. SDS allows you to stay focused on the problem at hand and can help you be more productive.

- Filters that are easy to use
- Sorting results sets
- Master/detail view (detail views for each table are stored in the database project).
- Columns of the table can be shown/hidden
- Ability to add columns to related tables
- Lookups (preview row for destination foreign key row), choosing rows from validation tables
- Foreign keys can be used to create automatic master/detail views
- Column layout - Ability to view columns from tables referencing foreign keys
- Column manager - hide and search in displayed columns quickly

Visualize points, lines, and polygons on a map. Open Street Map, Goole Maps, and Bing Maps are some of the most popular map services. Export map with markers to WEB page from the database

As data widgets, collect useful scripts that are related to a single table.

You can create custom widgets. Its SQL command depends on the variable @value.

The displayed database structure is always current, so it is not necessary to refresh. All operations are high-speed.

Quick search between views, procedures, functions, columns, and tables. From database objects, generate SQL scripts.

SQL Database Studio Pro Great Features:

- Graphics Query Design
- Great Code Completion
- Multiple Databases Support
- Spatial & GPS Data on Map Visualization
- Exports & Imports
- Easy & Fast Filters
- Comparing Schemas & Synchronization
- Diagram Designer
- Table Designer
