MssqlMerge Pro v1.41.0

2026-07-01 08:57:46

MssqlMerge is a user-friendly tool for comparing and merging Microsoft SQL Server databases. It simplifies comparing and transferring database objects and data between two databases.

MssqlMerge is a robust solution that swiftly merges two SQL databases and efficiently imports or exports custom tables and their associated data. The application offers an intuitive interface with a split workspace, making it easy to open and work with both databases simultaneously. You must connect to the local SQL server and load the desired databases using the appropriate authentication credentials to get started.

Once the connection is established, the tool provides a concise overview of the database contents for both projects. This summary includes the number of tables, views, stored procedures, and functions. Additionally, MssqlMerge distinguishes between the total count, recently added items, and modified entries, making identifying changes within the database structures easy.

MssqlMerge Pro Key Features:

1. Parallel database view: The tool allows you to work with both databases for efficient comparison.
2. Data comparison and differentiation: MssqlMerge highlights differences within the database structures.
3. Data merging, export, and import functions: The toolbar provides options like Total, New, and Changed to help you navigate the databases and identify recently added or modified objects. You can also select specific rows or tables for transfer between the databases.
4. Controlled data migration: The program offers separate functions for migrating data from one database to the other. It ensures that only the selected objects are processed, as tables are not supported. Before finalizing the data import/export, a confirmation screen displays the SQL merge script that will be executed.

In summary, MssqlMerge simplifies comparing and merging SQL databases with features like parallel database view, data differentiation, and controlled data migration to ensure efficient and accurate database management.
