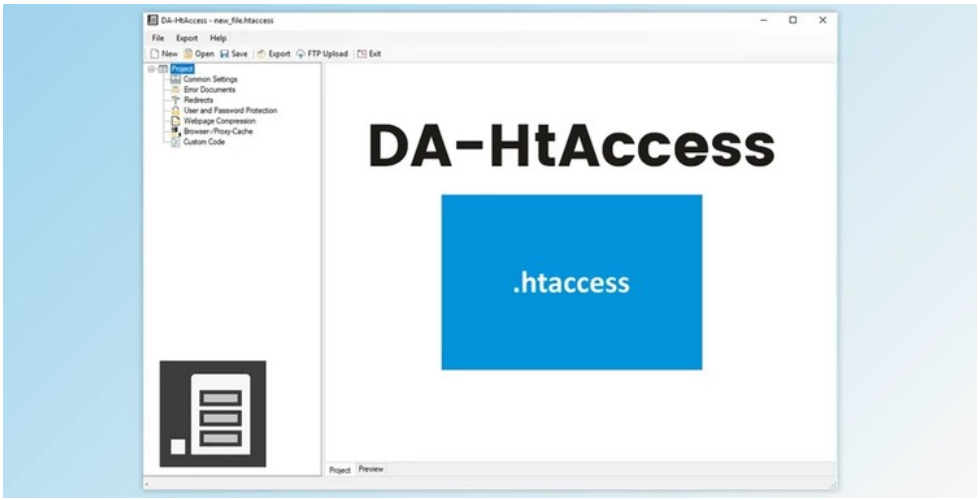
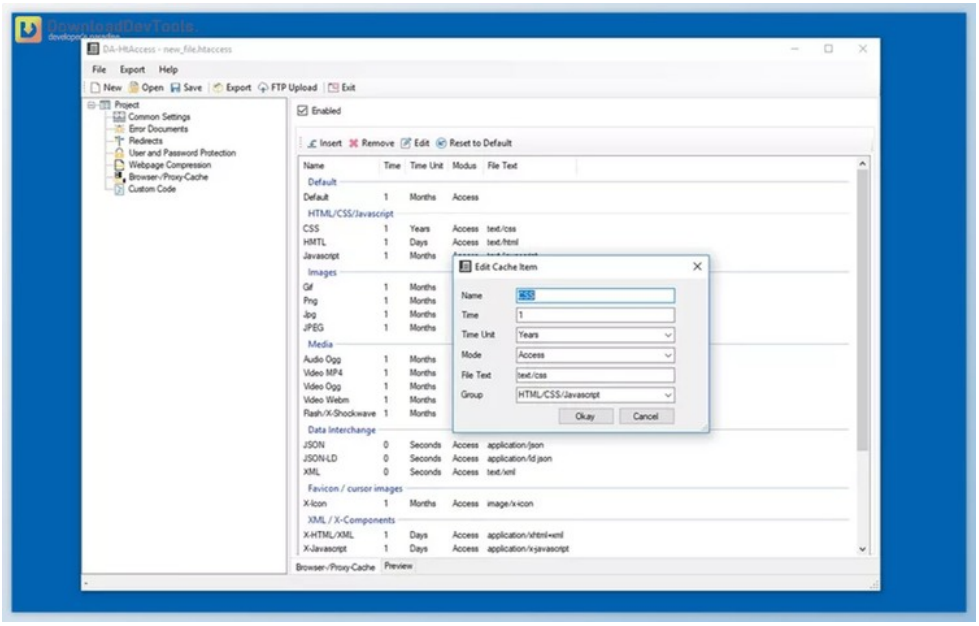
DA-HtAccess v3.2.2

2025-01-06 23:24:55





DA-HtAccess is a user-friendly tool that simplifies the creation and management of .htaccess configuration files for Apache webservers. With just a few clicks, you can set up essential functions like password protection, custom error pages, redirects, caching, HTML compression, and more. This means you don't have to learn the complex syntax usually required for .htaccess files. The integrated FTP upload function allows you to directly upload your .htaccess files to your webspace, making the whole process quick and hassle-free.

Password protection is made easy with , allowing you to secure specific areas of your website with usernames and passwords. You can create as many users as you need and generate secure passwords using the built-in password generator. Additionally, you can import and export user data in CSV format, making managing large numbers of users simple. Custom error pages, like the commonly seen 404 error, can be tailored to match your website's design, providing a better experience for your visitors.

DA-HtAccess offers robust caching and compression settings for those looking to improve website performance. These features help reduce loading times and improve SEO by optimizing your website's traffic and speed. You can choose to use the default settings or customize the caching duration for each file type. Redirects are also straightforward to manage, allowing you to change URLs or move your site to a different domain effortlessly.

Key Features of **DA-HtAccess**:

1. Quick creation of .htaccess configuration files
2. Password protection with unlimited users and CSV import/export
3. Custom error pages
4. URL redirects with CSV support
5. Cache settings and HTML compression
6. Integrated FTP upload for direct deployment
