Kellerman Software .NET Logging Library v3.20 (19 Dec 2021) Retail

2024-12-18 23:03:15

.NET Logging Library is described to be the cutting edge of the logging process and it is a very powerful tool compared to the smart inspect, Log4Net, NLog and a few more. It has all the usual local capabilities as well as the other capabilities including a wide variety of target, levels of log, file logging along with attachment, log viewer, Log expert and finally YALV. .NET Logging Library has the configuration editor that has the ability to edit the external config files with the use of the user app.config. It has the ability to set up literally in a minute and has the ability to do things like automatically increasing the level of the logging whenever and exception occurs. The user has the ability to create a target of logging for a specific user by simply deploying a configuration file easily and flexibly. The configuration has the ability to be overridden during the runtime by the user application and then it can be saved. There is no any other framework which has the capabilities as such. Junior programmer is creating an infinite loop, then the user has the ability to see thousands of messages being logged and the .NET Logging Library the has the ability to configure in order to ignore the same letter or not. When the process of logging is going on into a database daily has the ability to automatically produce the table as well of the corresponding stored procedure in order to log into a database and then roll up the entries of the database. The .NET Logging Library has the ability to be used with other .NET languages such as the C# along with VB da.NET.

Kellerman Software .NET Logging Library Great Features:

It has the following features and attributes that are stated as below such as:

- It is very easy to be used and operated by the user.
- The logging library of the .NET has the ability to be implemented as a static class and it can be performed along with the single line of code and hence there is no need to wrap a class which has been instantiated and there is also a concrete local class which is very ready for the making process with the Moq.
- It has to be loaded to multiple simultaneous destination at the same time the library is over 3 times faster than the rest as a Log4Net.
- The software of the logging as the ability to automatically calculate the difference in milliseconds for the user between the current lock the messages as well as the last message which has been logged.
- The logo has the ability to track the call as well as the performance of the stack.
- It has the ability to modify any setting which includes the logging target, logging levels, output formatting when the logging is happening.
- Different other logging framework need the external modification of the configuration files.
- It is capable of providing the users with the lifetime technical support.
- Upper royalty-free distribution included in the project of .NET.
- It consists of 100% managed code.
- It permits the user and developer in order to log all the properties of the object with the use of reflection.
