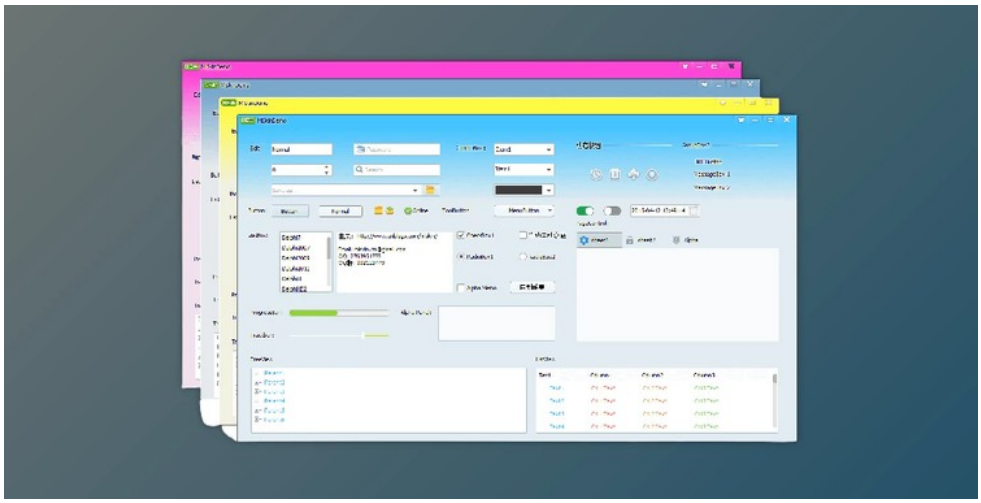
MISkin VCL v5.3 (08 Dec 2022) for D7-D11 Alexandria x86 ONLY

2025-01-24 08:25:12



MISkin is described to be a skin part which is located under the Delphi. It is inherited in the normal element of Delphi and has the capability to expand a lot more practical features as well as functions for the users and programmers to the phone, and it is considered to be slightly different from the standard component which is in usage of the VCL but it should be noted that the screen style is different. The user is capable of achieving the effect just like the skin of QQ easily and flexibly. All the user requires to do is to alter the style which is displayed in order to be reloaded as a photo and a lot of elements inside can be used by the user itself without even having to rely upon the shape of the epidermis. The screen impact can be customized as well as made quite elastic and the perilous keep parts can be supplied by more than 50 commonly used elements as well as functions along with their demos. The user has the capability to quickly and easily attained the impact that the user desires.

MISkin VCL Great Features:

It has the following features and attributes that are stated as below such as:

- It has the capability to support the single click skin change so that the user has the capability to set the picture as well as the color as a background of the window how long will it take to hue, saturation, as well as the brightness of the skin which can be adjusted by the will of the user on developer.
- The original picture resources management library is available which can be easily and quickly managed by the user and the pictures that are required in the program.
- The original resources of the image as well as the attributes are capable of supporting directly the use of the image ID or even the detailed path of the local image file in order to call the image resources.
- It has the capability to easily realize the shadow of the window as well as the effect of the special shaped windows and hence it is considered to be very simple as only two pictures.
- The toolbar is redefined here and the play style is very beautiful and has the capability to supports the horizontal as well as the vertical.
- The main menu can be displayed by the user on the title bar and the display position can be customized accordingly.
- Almost all of the components are capable of setting the display style individually for the user and the most of the container components are capable of setting the alpha value.
- The memo, edit, list View as well as other components that are capable of supporting the background which is transparent, the border effect which can be customized as well as the common search books along with the password inputs are added.
- The beautification of the menu, as well as the support of the transparency effect and setting the picture, all can be done by the user.
- Almost all of the components are capable of setting the displayed individually by the user and the most of the container components as well.
- It has the capability to provide more than 30 practical demos by the process of learning the user has the capability to quickly make a program interface easily.
- It has the capability to provide an original image resource attributes which can support the use of the image ID of the local image which is available.
