The Link Tracker is capable of making it effortless in order to monitor the use of the hyperlinks that are located in the emails or sides and also to prefer a redirection and produce a link that has the ability to perish and make the downloading of the link that are proactive expire. The links are basically being stored in the database so that the customers and the users can be queried. The SQL server, oracle MySQL, or even Microsoft Access can be utilized by the user and the developer as well as the .NET Link tracker. Tracking of the leaks as well as the URLs are basically being used in the marketing and it means the determining of the effectiveness of the marketing activities as well as the campaign. Without the link tracking it is very importable to determine where the traffic on the website is coming from. The process of tracking of the links is capable of showing the relation between the marketing activities a permit to user and developer in order to see the effectiveness between the different types of the marketing for the user business. The purpose of the link tracking is to create a unique URL which is only being used with one marketing activity. By including a link which is unique on the activity, the user has the ability to see the traffic and the source of it. Link tracking is basically used in order to report the effectiveness of the different activities of the marketing. If the user is hosting an event and desires to see the most effective way in order to promote the event the user has to create a tracking link for each and every marketing activity that he use in order to promote the event. This simply means using a tracking link for Facebook ad as well as another for a tracking link for an email about a particular event. The process of tracking of the link shows the user the result of each and every activity. Tracking is capable of working by attaching a digital tracking code to the link on the user website. Each tracking is unique in nature and so the data which is reported on each tracking link is specific to the link only. Tracking of the links looks like a normal link that has numbers as well as letters at the end of it. Almost everything has the ability to attract such as website pages, blog post, links that are on the social media, links that are on ads, telephone numbers as well as emails. All that is mentioned are tracked in order to provide data to the user and the developer. The benefit of tracking of the length is the connection that the user can make to the offline marketing as it is very difficult to see the direct effect of the offline marketing. By the use of the tracking link the user has the ability to create a direct relation between the offline as well as a result of the marketing. If the user is using and offline marketing, then include the tracking Link in the offer or the advertisement of the user which is unique only to the offline marketing activity. There are a lot of ways in order to track links and the best way is considered to be with the use of the services that provides tracking.
