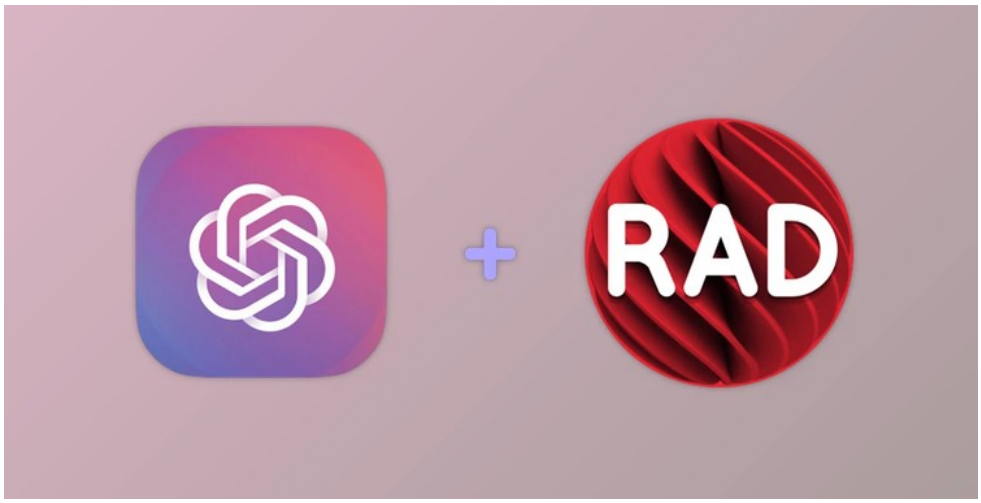
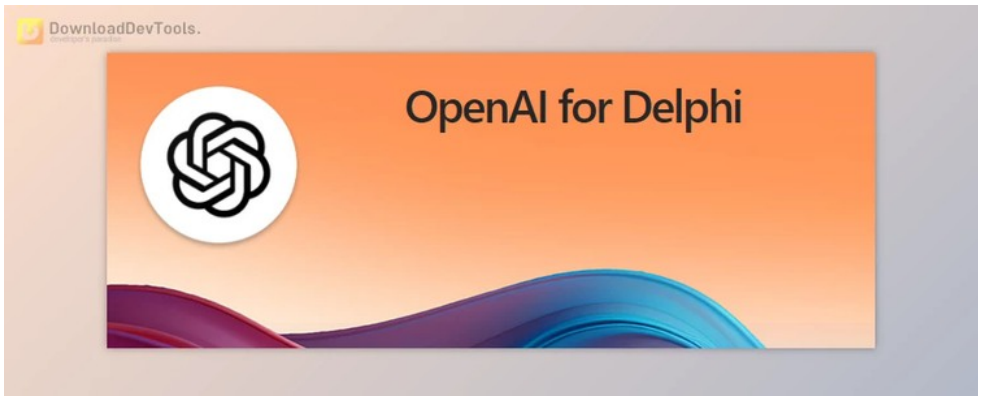
OpenAI for Delphi v1.3 (01 Aug 2024) Full Source

2025-01-01 21:45:24





is a client library that lets you connect to the OpenAI API using Delphi and Lazarus/FPC (Free Pascal Compiler). This means you can use popular OpenAI services, like ChatGPT, directly within your Delphi or Lazarus applications. It's designed to work seamlessly with all recent Delphi versions that include the System.Net.HttpClient unit and is expected to be compatible with platforms like Windows, Linux, and macOS.

This library does not require additional third-party libraries, making it easy to integrate. However, since it uses your secret API key, it's important to be cautious when using it in client applications to avoid exposing your key. To install the library, simply add the Source folder to your IDE's library path or your project source path.

Key Features of **OpenAI for Delphi** :

1. Easy Integration: Quickly add OpenAI services to your Delphi or Lazarus applications without needing extra dependencies.
2. Cross-Platform Compatibility: Works on various platforms, including Windows, Linux, and macOS, ensuring broad usability.
3. No Third-Party Dependencies: The library functions independently without needing any third-party libraries.
4. Secure API Key Handling: While it requires your secret API key, users must handle it securely to avoid exposure.
5. Support for Recent Delphi Versions: Compatible with all recent Delphi versions that provide the System.Net.HttpClient unit.
