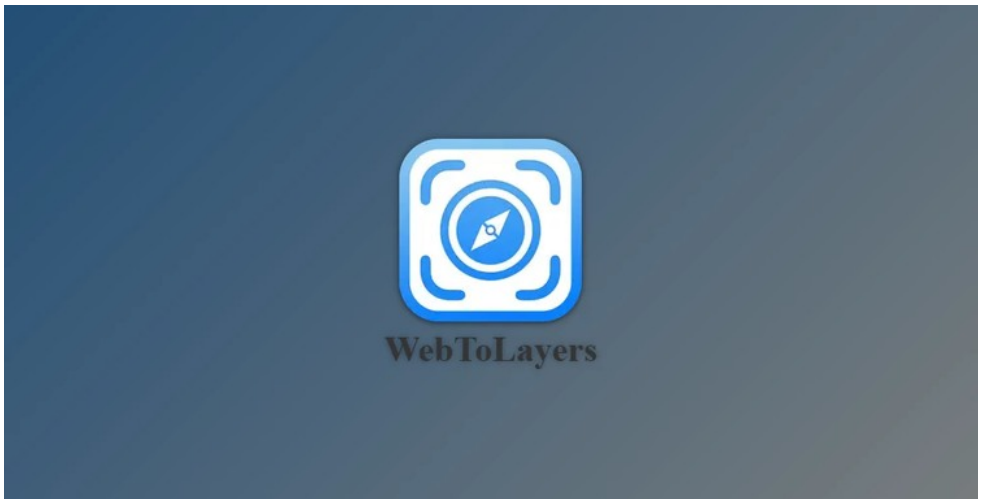
WebToLayers v1.3.2 (30 May 2022) for macOS

2025-02-02 16:10:13



WebToLayers converts websites into Photoshop documents. The application lets you take screenshots of pages by storing every HTML element as a separate layer.

WebToLayers converts websites into Photoshop documents. The application lets you take screenshots of pages by keeping every element in a separate layer. It will help you save time while redesigning or updating existing websites.

Converting websites into PSD format allows you to import pages already in use into design software like Photoshop and Pixelmator. This allows you to quickly design and sketch concepts while reworking and upgrading existing Web design.

The application lets you modify your size for the webpage and your web agents, and this allows you to emulate any device without it.

It has been designed to be optimized to work with macOS 11.0 and up. Feedback can be directly sent through the application. This way, you can get in touch with us with suggestions or suggestions for improvements within a couple of clicks.

WebToLayers for macOS Great Features:

- Safari extension
- Custom page size
- Custom web agent
- JS Injections
