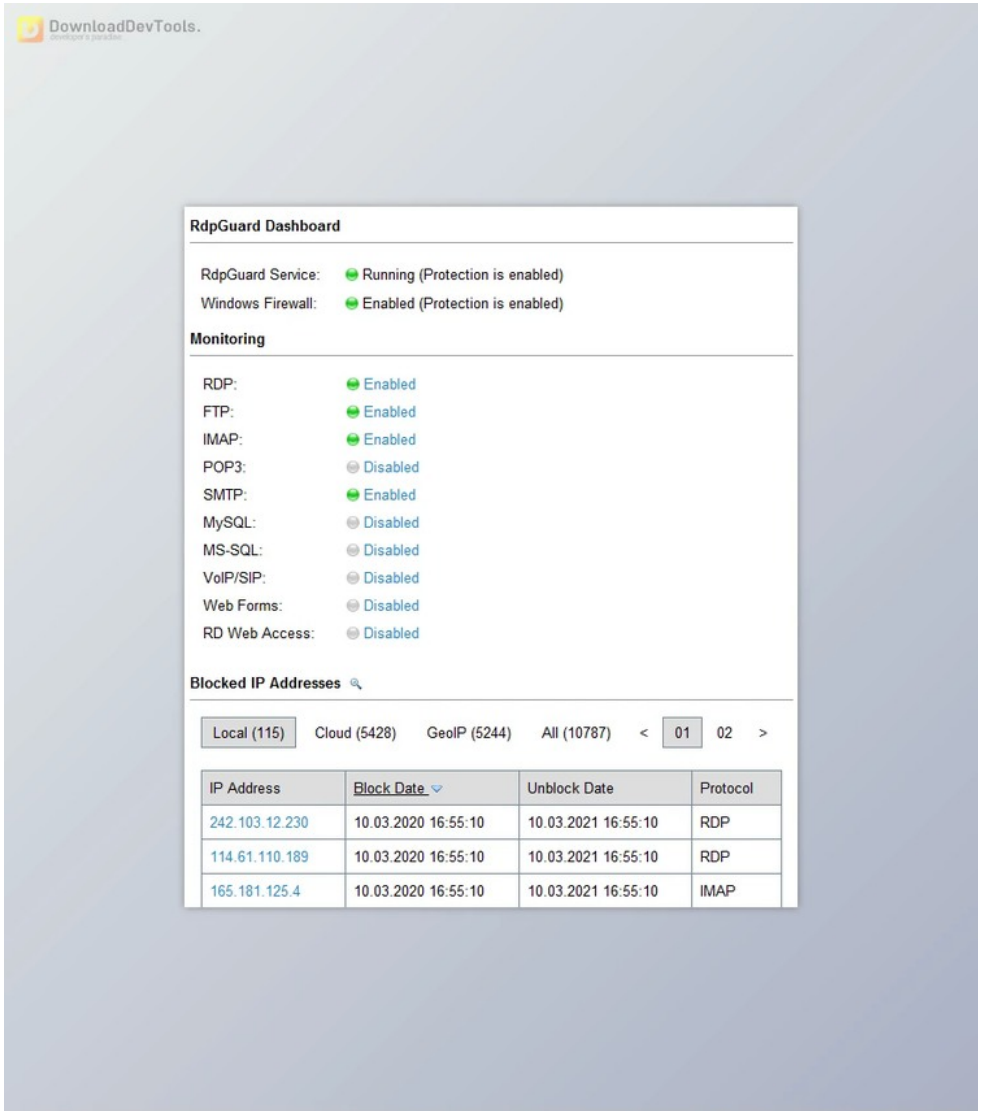
RdpGuard v9.9.7

2025-02-23 23:40:14



RdpGuard is a robust host-based intrusion prevention system designed to defend Windows Servers against relentless brute-force attacks on various protocols and services. It actively monitors server logs, detecting and responding to failed login attempts. Once a predefined threshold is reached, RdpGuard automatically blocks the attacker's IP address for a specified period, safeguarding the server from unauthorized access attempts.

The necessity for **RdpGuard** arises from the constant threat of network scanners and RDP brute-force tools that operate 24/7. Without protection, these attacks can compromise server security and strain resources. A quick examination of the server's Security EventLog often reveals numerous failed login attempts, emphasizing the urgent need for a proactive defense mechanism.

Tools Applications

stands out as a powerful solution, running as a Windows Service to ensure continuous protection, even when no users are logged in. By mitigating the risks associated with brute-force attacks, **RdpGuard** enhances overall server security, providing users with peace of mind against potential unauthorized access and resource strain.

Key Features of **RdpGuard** :

1. Host-based intrusion prevention system (HIPS)
2. Protects Windows Server from brute-force attacks on various protocols and services
3. Monitors server logs for failed logon attempts
4. Automatically blocks IP addresses with a set limit of failed login attempts
5. Blocks attackers for a specified period
6. Defends against attacks on protocols such as RDP, FTP, IMAP, POP3, SMTP, MySQL, MS-SQL, IIS Web Login,
7. ASP.NET Web Forms, MS Exchange, RD Web Access, VoIP/SIP, SSH, etc.
8. Operates as a Windows Service for continuous protection
9. Guards the server even when no users are logged in
10. Addresses the constant threat of network scanners and 24/7 RDP brute-force tools
11. Prevents unauthorized access and resource strain on CPU, RAM, disk space, and network bandwidth
