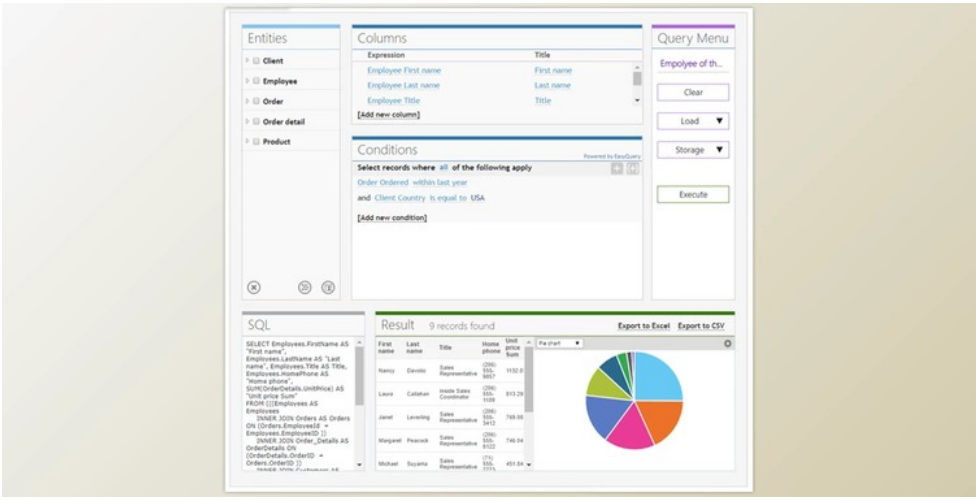
Korzh EasyQuery .Net for ASP.Net v7.2.3 (15 Mar 2023) Retail

2024-12-31 14:02:02



Ad-hoc query builder describe to be a very beneficial addition to the web forums as well as the web app of the MVC that requires some performance for the advanced process of filtering or even searching. The easy query parts of the ASP.NET are capable of giving the user program a very robust as well as an easy-to-use interface for the visual construction of the query. It has the ability to assist the user and the developer in the process of construction of the queries as well as reports without the requirement of constructing the queries as well as reports for the call for further aid or even to speak to the user service staff. It should be added that the process of querying the data is very easy if the user knows what and where he requires to search. The active query builder of the web API has the ability to help the user and developer in order to implement a full-featured interactive user interface in order to browse very massive datasets while the passing of a minimum amount of data to the client is needed. It has the ability to enable the user and a user in order to sort as well as browser paginated data which is returned in the response to the arbitrary SQL query while it has the ability to perform all the data manipulation right on the server side with the use of the SQL queries which are modified along with the active query Builder web API. The web client for the active query builder API is basically based on the jQuery and have the ability to be integrated into any web page with the help of a few lines of code. It is very compatible with the server-side languages as well as technology. It permits the user and developer in order to use any of the visual control in order to display the data. It permits the user and developer in order to analyze data user SQL query and also in order to make changes to do to prevent the access to the data which is unwanted. It has the ability to permit the user and developer in order to create new queries of select SQL from nothing but scratch. It also permits the user in order to switch from the database server just by the process of changing the target SQL and the server in the user application setting. It has the capability to support dozens of SQL Syntax for different database servers. The web API has the ability to make changes to the user queries in full accordance with the specified SQL dialects rules. The active query Builder requires information about the database schema in order to perform the SQL query analyzes as well as modification for the user and the developer. The information is basically required in order to create joins in the queries right according to the foreign keys in order to determine the list of the output of query and the columns for the query that are asterisk symbol in the select list.

Korzh EasyQuery .Net for ASP.Net Great Features:

It has the following features and attributes that are stated as below such as:

- All sorts of the ASP.NET as well as ASP.NET Core jobs are being encouraged.
- There is a good as well as a natural language query builder of the UI where the consumers do not have to understand about the user tables, hyperlinks and subject, or even some other related items of DB.
- The programming language is the C# which can be utilized in VB.NET or even some other language of .NET for the user and developer.
- The supports of databases are present just like the SQL Server, MySQL, Oracle, and even some other databases that have a connector of .NET.
- The recent version has the ability to support the framework of .NET 4.6.1 and even greater than that.
- The model of 3x which has now stopped has the ability to support the old .NET framework models and so on.
- It is considered to be very user-friendly and has the ability to provide the natural language of the query builder.
- It permits the user and developer in order to integrate the end-user oriented query builder right into the core project of ASP.NET.
