Windward Studios Fluent Designer v25.3.0.2

2025-11-09 16:29:58

Windward makes it incredibly quick & simple to create documents and make & edit visually attractive templates automatically. Our very best document generation software will help you design data-powered files, spreadsheets, & PowerPoint demonstrations: within your program, utilizing our SAAS alternative or from the CRM or other internet program. It is so simple & powerful our widely-used system is the norm for document automation.

The Windward Reporting Option is excellent for commercial applications developers, IT consultants, businesses, or system integrators who incorporate reporting and document creation functionality to their own desktop computer, internet, SaaS, or cellular goods.

In other words, the Windward Option works for your own reporting or record creation requirements, regardless of your business or situation.

Windward Studios can automate files, spreadsheets, reports, as well as presentations. Produce visually dynamic files that look exactly how you want, incorporating everything your business logic directly from the template utilizing our record automation program. And we are among the very first low-code/no-code record automation solutions from the business.

Windward's product package has everything you want from an API to incorporate Windward into your program (like as a microservice), into a comprehensive document automation alternative (net service or background), to some service incorporated into your CRM and other software.

Windward Studios Report Designer for .NET Great Features:

The Windward Option contains 2 products that work seamlessly together: the Engine code libraries and the AutoTag report builder.

The Engine is a set of code libraries for integrating reporting and record creation to inner and industrial software programs. You can:

- Create pages per minute, not seconds per page
- Utilize Many Different data resources, even concurrently on the Exact Same template
- Use a minimal footprint.
- Output to a wide Assortment of formats such as DOCX, RTF, PDF, HTML, XLSX, or even straight to your own printer
- Utilize a Java, .NET, or RESTful Engine
- Integrate with only a few lines of code
- Work inside your Current security protocols

AutoTag, Windward's report builder and template layout tool, allows you to produce your report and record templates from Microsoft Office. You can:

- Produce templates in Word, Excel, or PowerPoint -- company software you already know how to use
- format and Design record templates without relying upon your own IT team
- Customize the accounts and files that your end users need as AutoTag Delivers unmatched flexibility
- Enable end-users to easily edit and modify templates
- Cut your template layout time radically
- Produce reports without the standard limits of banded and proprietary design tools

You will save yourself time with files automatically generated from the data sources and templates that satisfy corporate needs; the file assembly will be precise & completely compliant.

Our platform provides all of the tools and skills to make stunning designs and eye-catching layout --just restricted by your

ASP.Net .Net Components

creativity.

It's possible to personalize your record format and content"on-the-fly" so that you can automatically produce files tailored to almost any viewer from only 1 template.

Using Windward's file generator, you can design templates fast (often in minutes), and you also do not need to be a developer to get it done. Faster document template layout is the vital performance to providing an automation alternative in only days.

Your layout, personalize, and edit files within the familiar Microsoft Office Package (file automation utilizing Word, Excel, and PowerPoint), making your document workflow encounter frustration-free from begin to finish. (The file generation part doesn't use Office.)

Document automation advantages companies by decreasing resources required for development to complete diminished programmer time and reevaluate your template development and file automation process, leading to considerable time and cost savings. Stop waiting to put money into your next big idea!
