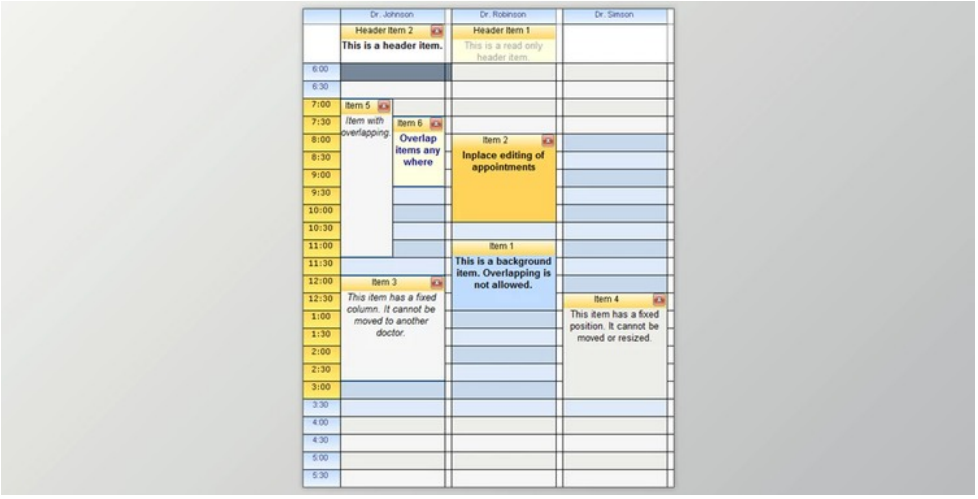
TMS IntraWeb Planner v3.3.3.0 (18 Oct 2021) for Delphi 2009-11 Alexandria Full Source

2024-12-18 23:02:00



TMS IntraWeb Planner Data-aware and non-data mindful programming elements for Intraweb software.

Irrespective of your company's work or line and its own operations, you have to keep tabs on the external and internal sources. As you can do this manually to get a somewhat small business, for bigger entities, this isn't merely challenging but also time-consuming, and you're going to have difficulty making everybody happy. Consequently, if you would like to save money and time in the long term, you might want to rely on a monitoring program.

TMS IntraWeb Planner is a library that can help you think of an interactive programming web application to assist your employees and company in conducting operations easily. The scheduled instrument you produce includes both vertical and horizontal oriented perspectives and allows you to resize, reposition and move items around using an easy mouse dragging gesture.

Additionally, You can customize the scheduling program, so the sidebars are positioned in the right, left, top, or underside of this planner and includes different screen modes for days, weeks, months, deadline, busy times, etc... Based upon the work grade, You could configure the application to accept events that may be transferred and edited. Alternately, the supervisor or group leader can make particular event update so that workers don't accidentally edit crucial events.

TMS IntraWeb Planner Great Features:

Part for interactive scheduling net programs.

- Horizontal & vertical oriented opinions
- Items Which Can Be resized/repositioned / transferred from mouse dragging
