Devart ODBC Driver for MySQL v3.1.3 (08 Apr 2020)

2024-12-18 23:01:45

Devart ODBC Driver for MySQL has the capability to provide the users with a very high speed as well as a connectivity which is feature-rich in nature along with the options for the compliant software of the ODBC in order to get MySQL, along with the database of the Microsoft azure for MySQL, Amazon Aurora database, Maria DB, right out of the windows, Mac OS and even Linux equally on both the 32-bit as well as the 64-bit. The total support for the functions of the ODBC API as well as a data types are implemented whenever the motorists is capable of making discussions for the user application with the help of the MySQL it a quick as well as a simple and at the same time a very convenient manner. The conductivity solution has the ability to empower different ODBC other programs in order to set up an immediate connection to the MySQL through the TCP by the user in order to get rid of the requirement for the clients of MySQL. There is a direct connection which raises the rate of the information as well as the transmission rate between the outside programs as well as the MySQL, and it is considered to be very essential for the information analysis in real-time for the user. Additionally, the installation process is streamlined because there is absolutely no need in order to distribute an extra client software along with the motorist.

Integration is all about the drivers who are capable of working with the third-party tools for the analysis of the information of the user. For example, Microsoft Excel has the ability to incorporate different IDEs just like the visual studio and so on. For the entire list of the compatible instrument as well as the environment the user has the ability to see the compatibility page.

Platform variety is all about the driver of the ODBC which is available for the MySQL and it can be employed with the 32-bit as well as the 64-bit program for the user on the x32 as well as x64 platforms. There is absolutely no requirement for the user in order to configure the driver, software or even the surrounding.

Entire Unicode compliant driver is available and with the use of it is possible for the user in order to recover as well as modify any information which is available in the multilingual database of the MySQL, irrespective of the character's which can be in Latin, Hebrew, Chinese, and so on in almost any language available.

Devart ODBC Driver for MySQL Great Features:

It has the following features and attributes that are stated as below such as:

- It has a full compliance along with ODBC API for the users and developers.
- There is a fast parallel bulk of loading of data.
- It permits the user to auto install within few clicks.
- It has the ability to support for the 32-bit as well as the 64-bit application for the users.
- It is available for the Linux, Mac OS, and even windows.
- It has a dedicated support of team for the engineers of the software.
- There is a support for the popular languages that are growing today.
