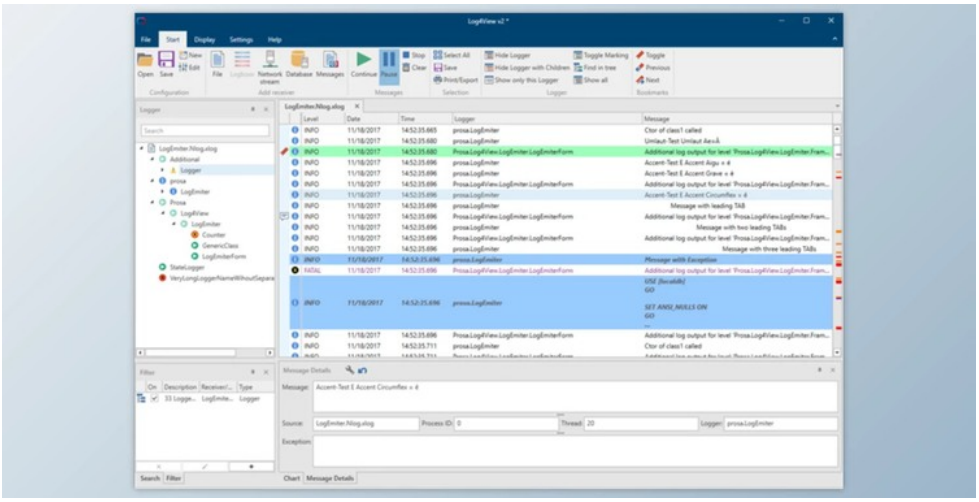
Log4View v2 1.5.3.1583 (05 Aug 2019) Professional Edition

2026-09-05 23:10:03



Log4View program is a handy viewer for XML formatted Log4Net logging output. It may filter and picture logging output from several log appenders like UDP appenders, document appenders, or perhaps from a recently composed TCP appender.

Software programmers often use Log4Net as an effective and flexible logging framework. It empowers programmers to utilize different hierarchical loggers to filter and organize the log output efficiently.

But, imagining the log files using a plain text editor is dull and exhausting. Programmers are frequently bombarded with plenty of log messages they aren't interested in now. Configuring the log4net output signal to filter the undesirable log messages can only be achieved by editing the XML config file, which will be achievable, however far from being handy.

After the program is finally running together with the filter configurations, programmers frequently notice after a specific occasion; they ought to have added additional loggers to possess more logging info around this occasion. This isn't feasible.

All they could do would be to correct their log4net preferences and await another occurrence of the appropriate event. This may be time-consuming and can be quite frustrating.

Log4View Great Attributes:

With the newest version of the log viewer, we supply a contemporary user experience, including an Office motivated Ribbon UI. This brand new User Interface is currently fully large DPI compatible and lets you get the most frequent application log attributes quicker.

We included several requested features to your finest logging encounter so much:
Entirely customizable material details see, more export options, added value distribution graph, enhanced and totally customizable message screen with standards-based design, plus even more! Log investigation at its best.

- Simultaneous logging of around 255 software. Messages of distinct receivers can be merged in a Frequent window or exhibited in different message windows.
- The growing logger tree reveals all famous loggers
- All logging applications configurations can be saved into a configuration file and readily be restored
- A graph window allows easy visualization of distinct loggers.
- Extended File Read Filter permits selective reading of extensive log documents.
- Edit your log messages together with remarks and bookmarks and save them.
- Minimize Log4View into the system tray and then receive audible and visual hints in incoming messages.
- Context-sensitive support in English and German
- File recipient allows visualization of messages together with the log4net along with log4j FileAppender and RollingFileAppender. The document recipient can read consecutive gathered files at the same time.
- Freely configurable filters enable the filtering of messages in reception or screen degree.
- Export log messages into Excel, XML, Text, or PDF documents or the clipboard.
- The customizable design of those visualized log messages. Font and color of log messages may be individually chosen, depending upon logger title, log level, message text, and other standards.

所有软件资源 100%安全 已检测 无病毒 无篡改
