Scalabium SMExport Suite v5.0 (b52) for D10-D10.3 Rio

2026-10-14 13:23:46

The native Delphi components within this package provide quick and immediate data export to MS Excel, XML, HTML, SPSS, PDF, and other formats from a DBGrid, Dataset, or other VCL controller!

SMExport suite is a set of the element that export information from TDataSet or TDBGrid or any other VCL control (like TStringGrid, TListView, and so Forth) into such formats as Paradox (if using the BDE) and DBase tables or into a text file (fixed or comma-delimited), HTML, XML, MS Excel, MS Word, PDF, MS Access, SQL-script, Lotus 1-2-3, Quattro, SYLK, DIF, LDAP DIF and other formats as explained in the next table.

Data-specific format configurations (like column widths, colors, fonts, selected records, etc.) are moved where possible. The SMExport parts are native VCL motors using multi-language support.

Notice that almost every part above enables the user to pick among 3 possible activities after the export process is now finished:

- Return control to the type (no actions taken following export)
- Mail the resulting document as an attachment
- Open the document from the supported software bundle (like Excel, Word, Access, etc.).

SMExport suite also comprises a convenient wizard, the TSMEWizardDlg () part, a self-healing wizard that guides end users from exporting any run-time information via a user-friendly interface that helps with export parameter settings. This element gives your user complete control over the whole data export procedure via a few simple mouse clicks. Drop the component onto a form and implement it on a proper button (or other consumer actions as you see fit).

Another helpful compound element from the SMExport suite is that the TSMExportMonitor () component. This element activates a visual dialog for placing export parameters. Judicious use of the elements allows you to programmatically control all information export procedures in one module and offer a flexible program for the end-users.

Customized data motors in the SMExport suite permit you to export information from almost any VCL control (TStringGrid, TListView, TDecisionCube, etc.). Included is a digital data engine that lets you create data in run-time that's not connected to any management. A Variety of third-party data sources are encouraged, too (, TMS, DOA, IBObject, DBISAM, etc.)

Scalabium SMExport Suite Great Features:

MS Excel directly without OLE

MS Excel 2007/2010 right without OLE

Create XML-file encouraged by MS Excel

Utilizing MS Excel as OLE-server

Utilize the DAO/MS Jet

Using MS Word because OLE-server

MS Word 2007/2010 right without OLE

RichText format (right without OLE/DDE/RichText. dll)

Text documents: CSV (comma-delimited) or fixed column diameter

HTML document

所有软件资源 100%安全 已检测 无病毒 无篡改
去预览

标签

Delphi Components VCL

XML file. Various designs are compatible with TClientDataset, MS SQL, ADO, etc

JSON document

Adobe Acrobat PDF document

Lotus 1-2-3 right without OLE

QuattroPro right without OLE

SYLK (Symbolic Link)

DIF (Data Interchange Format)

LDAP Data Interchange Format (directory entries)

SPSS document for statistical applications and investigation

SQL-script with an information dump

Paradox/DBase/ASCII documents (BDE is demanded)

DBase tables (with no BDE). Clipper, FoxPro, FVP, FoxBase, etc. affirmed

ADO data source (with no ADO VCL parts)

MS Windows clipboard with split fields/columns

Open Office record (through OLE automation)

Replicate information into another dataset
