Vemto v1.3.3 - A Laravel Studio and Code Generator

2025-01-02 12:06:27

Vemto is a Desktop Application that will power the way you start new Laravel Projects.

Vemto is a Laravel Studio as well as a Coding GeneratorGreat features:

It can create all of the Applications and API files that start with Model and Controllers and end with Views of CRUD, which includes Master-Detail forms.

Vemto creates code simultaneously: Clean and checked (TDD) easy and flexible.

It comes with a vast list of fields with standard sizes that automatically determines the field's size, its type size, the field's dimensions, the items (for the numbers), and a fake enumeration code (but you can change the entire configuration in case you want to).

Establishing an existing relationship that requires tables, as they belong to many people, generates the necessary tables for you.

When you create a relation, it automatically generates the necessary fields and key foreign ones.

With the CRUD Editor, the user can change the application's forms and validation and validation, among others.

You can change the settings to generate code for code generation, such as a safeguarded or fill-able method to assign assignments in bulk and change the default setting for Auth. Model, alter your namespace, and modify the directory to make Models and Controllers: models and Controllers and CSS Framework, CSS Framework, and CSS Framework.

You can select the modules you'd like to include in your code. For example, if you don't want to create Blade Views, you can de-check it. Blade Views, only check off the box before creating the code.
