

IB Objects (IBO) v5.12.5 Build 3125 for Delphi 7-12 Athens Full Source

2025-09-28 11:05:45

IB Objects (IBO) reigns as the ultimate toolkit for crafting robust client and service applications tailored for InterBase/Firebird within Delphi and Borland C++Builder ecosystems. With over 80 components optimized for 32-bit Delphi and C++Builder, IBO empowers developers to unlock the full potential of these database engines effortlessly.

Unlike generic database access layers, **IB Objects (IBO)** interface directly with the InterBase/Firebird engine's API, granting applications unfettered access to robust transaction capabilities. This direct connection enables functionalities like concurrent transactions and distributed transactions with two-phase commit, transcending the limitations of TDataSet.

represents a paradigm shift in database access, prioritizing seamless interaction with InterBase/Firebird to maximize performance and flexibility. With its dedication to efficiency and effectiveness, IBO stands as the premier choice for developers seeking uncompromising performance and functionality in their database-driven applications.

Key Features of IB Objects (IBO) :

1. Seamless transition from BDE to IBO with no loss of functionality
2. Full source compiles into EXE adding only 500-1,200KB
3. Easy distribution and installation
4. No royalties or additional libraries required
5. 2 to 4 times overall performance increase
6. Lightning-fast locates on large datasets
7. Virtual TDataSet compatibility with standard data controls, report writers, and InfoPower
8. Over 45 controls, lookups, grids, toolbars, and dialogues customized for optimal client/server performance
9. Supports release versions of Delphi and C++Builder from version 5 onward, all releases of Firebird and InterBase
