

Mustangpeak VirtualShell v2025.03 for Delphi 10.1-12 Athens Full Source

2025-04-15 17:40:04

TurboPack MustangpeakVirtualshellTools is part of VirtualShellTools for the Listview but can be used for a TListView Replacement that is faster and more customizable. This is a source-only release of TurboPack MustangpeakVirtualshellTools. It contains design-time and running-time tools for Delphi and is compatible with Win32 and Win64.

It is the Turbopak Mustangpeak software library designed for Delphi and C++Builder; it was initially created by Jim Kueneman and contained the EasyListView and the VirutalShellExplorer components. Mustangpeak VirtualShellTools offers Windows Explorer-style shell treeview and list views compatible with Delphi and C++Builder apps. The core component TVirtualExplorerTree is a VirtualStringTree descendant and has VCL Styles and DPI.
