Over ten decades of growth and refinement, the BardecodeFile program is the best, dependable, ready-to-use alternative.

BarcodeFile is a program that divides and renames TIF files in line with the barcode values located in the pictures.

The program reads files from input and creates new files in output. The original documents aren't deleted or modified. A brand new record title is controlled by a template, which may incorporate the initial file title, barcode values, and sequence numbers. Documents can be left intact or divide into sub-files by barcode location.

Softek BardecodeFile Program Great Features:

The program can either make complete duplicates of input files in the folder or utilize barcodes as page separators and divide the input into sub-files. The Entire List of choices will be as follows:

- Do not divide files
- Split - barcodes on the initial page of new files.
- Split - barcodes on the last page of fresh files.
- Split - do not include pages.

The output template controls how file names are now allocated. The template may include any valid file name characters.

The program can hunt for barcodes of kind Codabar, Code 128, Code 2 of 5, Code 3 of 9, EAN-13, EAN-8, UPC-A, UPC-E, and PDF-417.
