

PerfectXL Source Inspector v1.0.2 Pre-Activated

2026-08-10 14:01:34

PerfectXL Source Inspector is a powerful Excel analysis package, which will show the complete source of data behind any target cell or range. It enables users to see in a clear way how values are obtained by mapping internal and external sources thus facilitating easier validation of accuracy, tracing formulas and spotting weak points in complicated spread sheets.

The **PerfectXL Source Inspector** provides an organized view of all sources and interactive visualizations that display the flow of data between worksheets and files. It allows users to navigate relationships using dependency diagrams, drill down into the detailed calculation paths, and explore ranges and individual cells all without leaving the interface. This greatly saves time in terms of auditing and troubleshooting.

The multi-source visualization and exportable reports make Source Inspector particularly helpful to those individuals who handle large or sensitive Excel models. It allows comparing inputs side-by-side, pointing out inconsistencies, and creating clear documentation to comply with or review.

Key Features of PerfectXL Source Inspector :

- 1. Identify all data sources behind any cell or range
- 2. Distinguish between internal and external dependencies
- 3. Visualize data flow with interactive diagrams
- 4. Explore full calculation paths step by step
- 5. Inspect formulas and evaluated values instantly
- 6. Analyze ranges with quick statistics (data, formulas, empty cells)
- 7. Compare multiple sources in a single view
- 8. Export structured source reports for auditing and documentation
