Components

The is a component suite for the C++ Builder and Delphi. The Bergsoft NextSuite has been known for its thousands and thousands of users that have been registered over the past decades. The **Bergsoft NextSuite (VCL)** has the following components: the NEXT GRID, Next BGrid 6, Next Inspector 6, Next Collection 6, and last but not least, the Next Editors 6.

It is good to know that the component of NextGrid is a very powerful grid for the C++ Builder and the Delphi. The user can use it as the operation with this grid is very simple and easy and can be used during the design time and even run time. The NextGrid has more new features than the Delphi SrtngGrid and the List view, along with the attractive looks it provides to the users. The next is the NextDBGrid, a powerful Delphi and C++ data based on the famous components of the NextGrid.

We can surely say to our users that all the features present in the NextGrid are available in the NextDBGrid as well and have extended support for the database. Once you know how to operate the NextGrid, the operation of the NextDBGrid will be way easier for you. In the case of the Next Collection v6, there is a growing family of very easy-to-use modern components. It has components in this set, such as the NextBar6, NxPageControl6, NxLinkLabel6, NxHTMLabel6, and last but not least, the NxTile6. Finally, the NextInspector in this set is a very strong and new component, an Object inspector and has a classic style, which is a normal style and an enhanced one, and its themes are fully supported.
