SubMain CodeIt.Right Enterprise v2019.1.19180 (29 Jun 2019)

2025-01-01 22:16:27

CodeIt.Right provides a quick, automated means to make certain that your source code adheres to (your own) predefined layout and design guidelines together with best programming practices. We take static signal quality evaluation to another level by allowing rule offenses to be mechanically refactored into adapting code. CodeIt.The right will help increase your software quality, make sure code correctness, locate problems early and resolve them immediately whether you're beginning a new job or keeping existing merchandise, CodeIt.Right is the best option!

CodeIt.Right provides a quick, automated means to make certain that your source code adheres to (your own) predefined style and design guidelines together with the best programming procedures. SubMain requires static code analysis to another level by allowing rule violations to be mechanically refactored into adapting code. CodeIt.The right will help increase your software quality, make sure code correctness, locate problems early, and resolve them immediately. The Instant Code Review enables conducting a pick set of principles in the background to present real-time code topics feedback to programmers in the Visual Studio Editor.

Immediate Inspection permits the management of a pick set of principles at the background to present real-time code topics feedback to programmers in the Visual Studio Editor. The feature highlights from the editor code components that triggered breach and reveals a whole collection of record code problems in the ideal offenses bar (next to the scrollbar). The Violation detail window describes the matter's character, offers auto-refactoring alternatives, and the choice to dismiss (exclude) the breach. The attribute could be turned on/off using one click, supports multiple configurable user profiles, which may be changed in the toolbar or right margin offenses pub context menu.

Instant Code Review Instant comments on code scents and refactoring on the place!

Microsoft Strategies and Best Practices Rule set based on Microsoft .NET Guidelines and finest practices - straight from this box
