nrComm Lib Pro v9.69 for Delphi 7, XE7, 10.3, 10.4, XE11 and XE12.1 Athen

2026-06-09 16:17:51

is a versatile library for Delphi and C++Builder that simplifies communication tasks with various devices like serial ports, modems, barcode scanners, and more. Designed for developers, it helps create applications that can connect to different hardware interfaces such as Bluetooth, USB, GSM, and LPT. Whether you're building software for reading data from barcode scanners, sending SMS through a mobile phone, or controlling industrial hardware, **nrComm Lib Pro** offers the tools to streamline the process.

With this library, you can handle data protocols, manage device connections, and even perform sound operations like speech-to-text or playing audio through modems.**nrComm Lib Pro** supports old and new versions of Delphi and C++Builder, making it highly flexible and reliable for many projects. The library also features modern protocols like Modbus and ASTM, ensuring compatibility with a variety of systems and hardware.

The library constantly evolves to meet the needs of modern developers, offering a broad range of components and routines that cover everything from serial communication to USB device management. It is easy to use, offers extensive logging for debugging, and provides support for both 32-bit and 64-bit platforms, making it an ideal choice for developers building communication-heavy applications.

Key Features of **nrComm Lib Pro** :

1. Serial Communication (RS232/COM Ports): Provides access to serial ports, barcode scanner integration, and monitors control signals like RTS and CTS.
2. USB Device Support: Manages USB devices, monitors USB data, and includes drivers for easy device connection across different platforms.
3. GSM and SMS: Allows sending/receiving SMS, managing phone books, and gathering device information (e.g., IMEI, battery).
4. Bluetooth and HID: Handles Bluetooth communication and works with HID devices for input/output operations.
5. Data Protocol Implementation: Supports packet-based protocols like Modbus, ZModem, and ASTM, making it easy to handle structured data communication.
6. TAPI Modem Support: This software works with voice and data modems, allowing you to manage calls and convert text to speech.
7. File Transfer Protocols: Supports ZModem and Kermit for reliable file transfers over communication channels.
8. Parallel Port (LPT) Control: Provides access to LPT ports for parallel device communication.
9. Multi-platform Support: Compatible with both 32-bit and 64-bit systems, with support for WOW64 mode for legacy 32-bit applications.

所有软件资源 100%安全 已检测 无病毒 无篡改
