Devart dbExpress Driver for InterBase and Firebird v6.0.2 (17 May 2022) Full Source

2024-12-18 23:02:00

Db Express is described to be a database which is independent for the process of cutting that has the ability to define a very frequent interface and also to provide a rapid access to the firebird as well as enter base right from the Delphi as well as C++ Builder same like the Community Edition which is present on the Windows as well as Mac OS along with the Linux platform. For the servers it has the capability to provide a motorist as well as an independent library that has the ability to implement the frequent Db Express where the users and developers for the process of processing the queries as well as during the procedure. The user has the capability to use the driver which is precisely the same as it is provided by the Embarcadero. The driver of the Db Express for the entire base as well as the firebird has the capability to supply the access to the interbase as well as the firebird databases equally. It has the ability to immediately use the interface as well as the client application in order to connect to the host. The driver requires an interface client and then it has the ability to be installed on the side of the client. The software is based on the driver of the Db Express and it is very simple for the user to deploy it. It does not need to be installed and there is no different information supplier layer require and this is the reason why it can work faster as compared to others that are based on the Delphi data connectivity option for the user and developer. The driver of the Db Express for the interbase as well as the firebird is considered to be a cross-platform option for the process of creating the software and utilizing a different set of IDE for the users on Developers and the driver for the interface as well as a Firebird which has the capability to supply the support for the user Fire monkey platform and allows the user to develop high performance software which is native for the Mac OS as well as Windows.

Devart dbExpress driver for InterBase and Firebird Great Features:

It has the following features and attributes that are stated as below such as:

- It has the capability to define the interface which is common in order to provide a quick access.
- It provides a driver which is an independent library and has the capability to implement the interface for the process of processing the queries.
- The product has the capability to support the server version of the interbase as well as the Firebird.
- The components as well as the libraries are designed in such a way in order to help the user to write a high performance as well as a lightweight data access layer.
- It has the ability to use the data access algorithm which is advanced as well as has the techniques of the process of optimization.
- db Express has a driver for the firebird as well as in her base and it does not limit the choice of the user for the process of development of the platforms.
- It is considered to be a compatible product with the latest version of the IDE as well as the addition which includes the Community Edition, along with the Embarcadero RAD Studio, Delphi and so on.
- It has the capability to be compatible with the previous versions of the IDE.
- It has the capability to support the major framework of the Delphi GUI Purdue users and developers along with the application of the VCL which is present for the windows as well as the application of the FMX present for Mac OS as well as Linux.
- It permits the user and developer in order to develop visually a very spectacular high performance which is a native application mainly for the Mac OS, Linux as well as Windows.
- It permits the user and developer in order to develop the platform with Delphi for the 32-bit as well as the 64-bit.
