- Thorough highlighting of changes in lines
- Collapsing of unchanged text areas (CodeCompare Pro-feature)
- Point-and-click unite using a mouse.
- Editing documents on the fly using a Trusted file compare application
- Merging shortcuts for advanced users

- Construction comparison style - comparing resources through their signature instead of only by their place.
- Lexical comparison from leading programming languages -- C#, C++, Visual Basic, JavaScript, Java, XML
- Syntax highlighting for programming languages
- Matching approaches in comparison source code documents.
- Much like lines of code have been matched after refactoring.
- Discovering transferred blocks of code in case source code is reordered in documents.
- Displaying changes in code arrangement from Difference Explorer
- Code outlining for collapsing and expanding areas of code

- Advanced diff directories compare the usefulness.
- Color-coding for added, deleted, and modified files
- Filtering Alternatives for excluding or including specific file types
- Immediate opening of person file comparison files
- Display choices for greater contrast result analysis
- Batch file copying from pane to the pane or into a chosen folder

- Compare code without even leaving your favorite environment.
- Native Visual Studio extension for easy integration
- Visual Studio 2015, 2017, and 2019 supported.
- Opt to use standalone or incorporated Code Compare the fly
- Link Code Compare to Android Studio as an external application to compare and merge code.

- Colored cubes for added, deleted, and modified text
- Integrates with version control systems since the mixing instrument for conflicting file revisions
- Non-conflicting changes are merged automatically.
- Merging battles are emphasized.
- One-click conflict resolution using a mouse
- Three-way contrast to compare and merge files side-by-side
