Applications　　Tools

is a comprehensive tool designed to secure your application servers and remote desktop environments with just a few clicks. It helps protect your IT infrastructure as you transition to remote work, protecting you from hackers and online threats. With powerful security features all bundled into one solution, **TSplus Advanced Security** allows you to customize how your remote workforce accesses your systems, giving you complete control over permissions, locations, and times.

This security solution is highly customizable to suit your specific needs. You can define who can access your servers, from which countries, at what times, and even from what devices. Plus, it offers great value for money by providing lifetime licenses, making it a cost-effective way to protect your business without recurring fees.

TSplus Advanced Security provides an all-in-one solution for securing your IT environment. From blocking malicious IP addresses and restricting access from specific countries to preventing brute force attacks and controlling user working hours, it covers all the bases to ensure your remote access infrastructure remains safe and secure.

Key Features of **TSplus Advanced Security** :

1. Hacker IP Protection: Automatically blocks known malicious IP addresses, shielding your systems from online attacks, malware, and botnets.
2. Homeland Protection: Control access by country, allowing or blocking IPs from specific regions to protect your servers.
3. Internet & IP Access Restriction: Limit access to only private and trusted IP addresses, ensuring a secure remote environment.
4. Brute Force Defender: Protect your public servers from brute force attacks by automatically blocking IPs after multiple failed login attempts.
5. Working Hours Control: Set specific time slots for users accessing the system, automatically disconnect them outside these hours, and send warning notifications before logoff.
