RDS Advanced Security Ultimate v7.4.10.28

2026-04-08 08:53:56

RDS Advanced Security Ultimate is a comprehensive system that helps protect your Remote Desktop against cybercriminals, including hackers, brute-force attacks, and ransomware. It doesn't matter whether you run or manage a large team or a remote setup, because this tool will allow you to keep your IT environment safe with minimal effort. It takes a few clicks to block dubious IPs, access trusted states, devices, and follow login attempts in real-time.

The smart automation and flexibility of this solution make it unique. You may authorize logins for your particular users at specified times, within granted hours, and even couple gadgets to users, such that no person can break in using stolen credentials. When a ransomware attack occurs, the system detects and shuts down the attack in seconds, allowing you to restore files using the built-in snapshots, all without disrupting your business.

What is even better? It has no subscription. **RDS Advanced Security Ultimate** offers lifetime access for a one-time payment. All is done through a non-technical, scalable dashboard to monitor activities, adjust security preferences, and receive alerts on abnormal situations. It is the most effective and cost-efficient means of securing your remote servers.

Key Features of **RDS Advanced Security Ultimate** :

1. **Hacker IP Protection:** Automatically blocks millions of known threat IPs every day, keeping your servers safe from attackers.
2. **Live Connection Map:** Displays in real-time who is attempting to connect to your server and where they're originating from.
3. **Geographic Access Control:** Block or allow access from specific countries, and restrict connections to only safe, approved locations.
4. **Internet & IP Filtering:** Allow access only from trusted IPs or private networks to avoid unauthorized users.
5. **Brute-Force Attack Protection:** Prevents repeated login attempts by hackers by blocking IP addresses after a specified number of failed logins.
6. **Ransomware Defense:** Detects and blocks ransomware in real-time using behavior-based analysis, not outdated signatures.
7. **Trusted Devices:** Allow users to connect only from approved devices, preventing intrusions even if credentials are compromised.
8. **Session Security Levels:** Select between Windows Mode, Secured Desktop, or Kiosk Mode to manage user access and capabilities.
9. **Time-based Access Rules:** Define working hours and automatically log out users outside of those hours.
10. **Permission Dashboard:** Easily view and manage file, folder, and printer permissions for users and groups.
11. **Snapshots & Recovery:** Quickly restore files affected by ransomware with automatic snapshots.
12. **Real-Time Alerts:** Receive instant notifications via email about security events and take prompt action.
