Kellerman Software .Net Code Generator v1.20 (14 Dec 2021) Retail

2024-12-18 23:03:15

The .NET Code Generator is among the handy tools on your toolbelt. The other business code generators are primarily based on creating code from database schemas. The .NET Code Generator can't just create from database schemas and generate according to additional source code courses, JSON, or even CSV Documents.

Kellerman Software .Net Code Generator Great Features:

- Simple to Use.
  Publish your database schema or code, then decide on a current template and click on create.
- Generate any code
  Your creativity is your limit. Generate any code out of SQL, C#, Java, TypeScript, Ruby, Rust, literally whatever your soul desires.
- Publish database schemas
  Create code based on Firebird's database schema, MS Access, MySQL, Oracle, PostgreSQL, SQLite, SQL Server, and VistaDB databases.
- Publish present code
  Create code based on source code courses of C#, VB.NET, TypeScript, CSV, JSON, and easy text lists. Use T4 Templates
  The templates are all predicated on the dependable T4 templating language from Microsoft.
- Share Your Programs
  Share your Code Generator Programs on GitHub.
- Multi-threaded creation
  All available chips are utilized to create code.

(You can create your own too!)
