GemBox.Spreadsheet v2026.5.101 (05 May 2026)

2026-05-18 09:51:27

GemBox.Spreadsheet is a versatile .NET component tailored for efficient spreadsheet management within applications. Supporting various formats such as XLSX, XLS, XLSB, ODS, CSV, TXT, and HTML, it provides seamless reading, writing, editing, conversion, and printing capabilities. Its intuitive API facilitates integration into .NET projects across diverse platforms like .NET, .NET Core, .NET Framework, Mono, or Xamarin, offering developers a managed code solution independent of Microsoft Excel. The component excels in handling extensive datasets with remarkable speed and minimal resource consumption, boasting the ability to process up to a million rows in under 3.5 seconds with less than 256MB RAM.

GemBox.Spreadsheet offers a comprehensive suite of advanced features for the thorough manipulation of spreadsheet models. Developers can effortlessly edit cells, styles, formatting, formulas, images, charts, pivot tables, and protection mechanisms. Additionally, the component ensures high-quality rendering and printing, facilitates formula calculation, and supports medium-trust environments. Notably, it preserves unsupported elements and properties when reading spreadsheets, ensuring data integrity and compatibility.

In summary, stands as a reliable, efficient, and feature-rich solution for managing spreadsheet files in .NET applications. With unparalleled performance and ease of use, it eliminates dependencies on external licenses or resources, empowering developers to seamlessly incorporate powerful spreadsheet functionalities into their projects.

Key Features of **GemBox.Spreadsheet**:

1. Support for various spreadsheet formats including XLSX, XLS, XLSB, ODS, CSV, TXT, and HTML
2. Cross-platform compatibility for .NET, .NET Core, .NET Framework, Mono, and Xamarin

所有软件资源 100%安全 已检测 无病毒 无篡改

ASP.Net .Net Components

3. High-speed processing capability, handling up to a million rows in under 3.5 seconds with minimal RAM consumption
4. Comprehensive API for reading, writing, editing, conversion, and printing of spreadsheet files
5. Advanced features for manipulating cells, styles, formatting, formulas, images, charts, pivot tables, and protection mechanisms
6. High-quality rendering and printing ensure accurate representation of spreadsheet data
7. Support for formula calculation and medium trust environments
8. Preservation of unsupported elements and properties when reading spreadsheets
9. Managed code solutions independent of Microsoft Excel, adhering to .NET class library design guidelines
