What's new in GEOlayers 3?

Version 3 was built entirely from scratch. Since the version 2 release, we've collected user feedback and continuously improved the extension. GEOlayers 3 has been designed to meet your requirements.

- New UI
- Maps are able to be pitched or rotated in 3D
- Automatic Labels
- Mapstyling directly within After Effects
- Faster Finalization
- Scripting API
- **Animate in 3D Space:** Intuitive controls to reestablish maps in 3D space. You can scroll, scroll, pinch, and rotate your own maps in After Effects, Create keyframes, and reestablish them. GEOlayers 3 leaves All of the vision for your animation.
- **Online Search:** Locate geographical characteristics on the web. Search online For states, cities, famous buildings, points of interest, plus a whole lot more. The Attributes you locate can be tagged on your cartoon; they may be attracted to your Map, downloaded, and exported for additional evaluation within an outside GIS program.
- **Map styling:** Design your maps however you desire. You can design maps Right inside After Effects. Choose colors, fix the line width, swap Fonts, insert hill shading to your own maps, and show and conceal certain classes of features.
- **Labels:** Add tags to your cartoon. The label features with a single click. Use and customize the default tag templates or make Your ones. Each After Effects composition may be utilized as a tag template.
- **Data Visualization:** Develop Data-driven contour layer styles. GEOlayers 3 permits you to import datasets from .csv or .tsv file formats easily. Data-driven Styling can help you rapidly visualize datasets in After Effects compositions With only a few clicks.
- **3D Landscapes:** Develop 3D arenas with a single click. If you've installed Trapcode Mir 3, Mettle FreeFormPro, or Rowbyte Plexus 3, you can create stunning 3D landscape installations with a single click. You can achieve magnificent Animations based on actual elevation information.
