Devart dbForge Data Compare for SQL Server v2026.1.39 (15 May 2026) Enterprise

2026-06-02 12:09:48

is a robust, swift, and user-friendly tool tailored for seamless data comparison tasks. Equipped with powerful capabilities, it effortlessly handles large datasets and supports native SQL Server backups, offering a comprehensive solution for SQL database comparison needs. This tool allows users to conduct SQL database comparisons, analyze data differences, generate comparison reports, and synchronize SQL Server data via an intuitive wizard interface. Moreover, it seamlessly integrates with SQL Server Management Studio, enhancing workflow efficiency.

Users can easily detect data changes between live databases, backups, or script folders and generate T-SQL scripts to update databases accordingly. **Devart dbForge Data Compare for SQL Server** facilitates data restoration from native backups to a single row, simplifying data recovery tasks. Furthermore, it enables the seamless transfer of lookup data from development environments to staging or production databases, streamlining deployment processes across SQL Server, SQL Azure, and SQL Server on Amazon RDS.

With robust comparison options, custom schema mapping, and the ability to export comparison reports in various formats such as CSV, HTML, and Excel, **Devart dbForge Data Compare for SQL Server** ensures accurate and comprehensive data comparison results. Its professional edition extends its capabilities to include support for scripts folder and SQL Server backup comparison, further enhancing its utility for complex data management tasks. With a command-line interface for automating routine data synchronization tasks, this tool empowers users to streamline data management processes effectively.

Key Features of **Devart dbForge Data Compare for SQL Server** :

1. Effortlessly compare data in SQL Server databases
2. Detect data changes between live databases, backups, or script folders

所有软件资源 100%安全 已检测 无病毒 无篡改
