How the light behaves – Natural light taught through Portrait Photography: Embark on a hands-on journey with me in this on-location course, where we delve into the intricacies of natural light and explore its nuanced possibilities in photography. Whether shooting film or working with digital cameras, mastering the art of capturing the right moment in the right light is crucial.

I firmly believe in getting it right during the shot rather than relying on post-processing fixes, regardless of your camera. Our expedition spans from daylight to night, navigating through diverse light situations, including open shade, reflected light, direct sun with shadows, directed indoor light, and more. While these are just a few bullet points, within each scenario lies myriad nuances that can elevate your image from good to exceptional.

We'll be painting with light, a process intricately tied to playing with composition. Through this exploration, I aim to impart the technical aspects of understanding light and the artistic finesse of using it to your advantage. Whether capturing portraits, documenting moments, exploring architecture, or traversing the streets, this course is designed to nurture your growth as a photographer.

Key Highlights:

- Dive into various light situations, uncovering the subtleties that make a significant difference.
- Understand how light behaves to apply your knowledge in any photographic scenario.
- Focus on portraits while ensuring the lessons universally apply to different photographic genres.
- An intermediate level is ideal for those with a basic understanding of the exposure triangle, but ambitious beginners are encouraged to join.

As we navigate the course, be prepared for a cascade of tips, tricks, and musings on photography. Join me in this enriching experience, where we capture moments and craft them with a deep understanding of light. Let the journey begin!
