# Apple macOS Catalina v10.15.7 (19H2) Final + v10.15.3 for VMWare

2026-08-30 07:31:24

**macOS Catalina** (variant 10.15) is the sixteenth and, as of July 2020, present significant release of macOS, Apple Inc.'s desktop operating system for Macintosh computers. It's the successor to simplifies macOS Big Sur and macOS Mojave, which is supposed to be published in the next half of 2020. It has been released to the general public on October 7, 2019, and had been announced on June 3, 2019. Catalina is the very first model of macOS to encourage also the first and just applications to add Lock. It's the previous variant of macOS to have the model number prefix of 10, since another launch, Big Sur, is recorded as version 11.0.

The process is called after Santa Catalina Island, which is situated off the coast of California.

## Favorite programs perfected.

**Reminders** alter its appearance and performance in the new macOS 10.15--it is a Brand-new, intuitive interface that gets you on track of productivity:

- More convenient edit switches
- Smart lists for organizing reminders across groups
- Flexible lists along with also a brand new method to categorize lists
- Attachments and messages integration
- Improved voice lookup ability together with Siri intelligence.

If Instagram is the typical habitat or you simply enjoy great photography, the upgraded **Photographs** program is going to be a massive advantage for you. By daily, monthly, and yearly views, photographs are categorized by the program with a focus on your timeline. So you get a neat set of memories.

What is more, the Photos program in Catalina incorporates AI for eliminating duplicates and locating the best photos. Personalization you have never noticed before. Except for Setapp, where you can use catch a finder for Mac, Gemini. What is good about Gemini, the copies are not only detected by it but documents with composition too. So that you do not require the Photos update should you own it.

Improved hunt is the defining characteristic of **Notes** at macOS 10.15. The program is enriched to look at text using a file scanner and may recognize objects.

If you have just changed, you will also detect **Safari** changes--in the brand-new beginning page to smart redirects to tabs. The upgrades can allow you to maintain the most often visited websites.

## Get Sidecar and utilize the iPad as another screen.

Catalina provides you an excess track -- simple by linking your iPad to empower. The attribute is named **Sidecar,** and it is the very first arrival of an elongated workspace on Mac. It is possible to allow the mirror perspective if you would like to utilize Sidecar for sharing everything you are working on. Catalina users access a vast selection of programs like Affinity Photo Adobe Illustrator, Sketch, and much more.

## Port iOS programs to macOS

Aside from an excess display, you get to enjoy your programs. With the advent of Catalina, programmers, and an app porting feature, which relies on the aid of UIKit programs, can adopt. It lets you place an iOS application. So if you are an iOS dev along with Catalina is run on by your Mac, you are sort of a Mac dev.

## Find your missing Mac, asleep or awake.

Other Operating Systems

Long story short, Locate My iPhone and Locate My Friends got married, and his kid lives on macOS 10.15. It is named **Locate My**, a secure app for finding your Mac. According to Bluetooth sign detection, Locate My empowers apparatus that are nearby in case it goes missing to seek out your device. The best part is that your Mac.

## Do not grieve iTunes; you Eliminate nothing.

You have got it right, iTunes is something of the past. But nothing that has been on iTunes disappears out of the Mac. Rather than a single media library, you receive Apple Podcasts, a music program, and Apple TV. What is more, there'll nonetheless be. So it is not dead. Lives a life that is different now.

## Screen Time for intelligent Mac ingestion

Year launched on iOS; Screen Time is currently arriving at macOS using the Catalina launch. Place Downtime to view you spend some time on Mac, and the program allows you to make custom use reports. Fantastic for management. And usage, let us be fair here. You may watch the usage data and establish for your Mac stream is controlled dedicated program or communicating limitations.

## Safe and reachable macOS

We haven't inquired apple, but it seems like these men spent a lot into creating Catalina hyper accessible and safe:

- **No messing with your information**. You can be sure if you don't permit it, no program will get access or iCloud In case your Mac runs Catalina. Neither is it able to catch or capture your display.
- **Read-only system quantity**. Catalina runs to an amount that is dedicated, separately. Where your data is saved, so it is 100% clear --not intersecting with data.
- **Mr. Chief Guard, Gatekeeper**. Before installing a program from an internet site or the App Store, Gatekeeper will confirm its safety.
- **The lowered threat of macOS harm**. Consumer and driver kit space system extensions run from Catalina, so should they malfunction, macOS will not be influenced.
- **You have the vital**. Now you can use Activation Lock on iOS apparatus if your Mac has Apple T2 Security Chip. This indicates that you're the one person who will unlock or unlock your Mac information, will the device get lost (that we expect it will not thanks to locating My program).
- **Voice controller:** it is possible to control 100 percent of the macOS 10.15 characteristics together with your voice just. Accurate shifting between orders, and dictation, advanced processing --it is zero fuss, endless accessibility.
