WcfStorm Enterprise v3.7.0

2024-12-18 23:02:00

WcfStorm is a dead-simple, easy-to-use evaluation workbench for WCF Services.
It supports most bindings (except webHttp) such as netTcpBinding, wsHttpBinding, and namedPipesBinding, to list a couple. Additionally, it enables you to create operational and performance test instances, thus ensuring your WCF Services are bug-free and working precisely as you have designed.

WcfStorm is the name of a software developer that falls into the category of network and server software. With this software, you will be able to explore several web services and networks. The software in front of you uses the .NET Framework to work. Due to the continuous processing that is required, you need powerful software. The software in front of you has many connections, and you can open an account to do your business.

The WcfStorm software environment is such that you can run tests on your network and server using the tools in this software. These tests can be done online and offline. It also has powerful tools that can show you the results of your tests. Also, depending on the test you are about to do, your hand is open to using different methods to perform the test. If you are a network administrator or server, this software helps you test them before making any changes.

The Enterprise Edition-Unlimited is a website-wide license and can be for enterprise or commercial usage only.

It's valid to be used on an *infinite * number of chairs within the company.

WcfStorm Enterprise Great Features:

- Benefit from a user-friendly interface to make your software easier to use
- Perform advanced tests on your network and server
- It can be used and tested both offline and online
- Enjoy advanced tools to enhance the quality of your tests
- Use the tool to display the results of your tests
- Non-stop processing of information and data

所有软件资源 100%安全 已检测 无病毒 无篡改
