The word "one-of-a-kind" is no exaggeration. There's a reason that you can not find a collection like this that is devoted to crocodile or alligator sounds elsewhere. These sounds are not just able to be hazardous to record, but they are also tough to record, as alligators tend to be very stealthy and quiet animals... Except when mating season begins.

Luckily, recording artist Colin Hart embarked on several trips to these swamps and wetlands of Florida to discover methods for triggering the ominous sounds of these cold-blooded beasts, so you don't need to. In seven years (plus an mangled encased blimp, a destroyed boom pole JBL baby strollers, and a few subwoofers that Boeing tested), The excellent recordings of alligators are accessible for use in your projects. You can learn details about the incredible recording procedure of this library at the blog PSE.

Alongside the bellowing mating sounds, warning hisses, frightening snarls, and other alligator sounds, the Gators library also has recordings of submerged hydrophones and bird and marsh sounds.

This rare instrument to your sound design toolset brings life to monsters, creatures, and dinosaurs. Crocodiles and many other creatures. The natural majesty of these sounds makes ideal layers for explosions, thunder engine noises, fire, and much more.
