is a complete toolkit for creating modern, high-quality web applications. Some things to know: it has over 110 fully customizable UI components that handle all your application needs for data management and user experience, performance, and accessibility. Whether you visualize data with Grids and Charts, arrange events with the Scheduler, or rearrange laundry with the Todo Manager, our custom-developed Component Era saves you from drudgery. Also, you don't have to mess with designs because you have tools like Theme Builder and Telerik's Design Kits for Figma at your disposal.

Moreover, the **Telerik UI for ASP.NET** contains a set of document processing libraries for parsing popular formats, such as PDF, DOCX, and XLSX, without requiring third-party software – and powerful tools like the Telerik REPL for testing and sharing code. Telerik UI supports Windows, macOS, Land Linux, and compliance with WCAG and RTL while supporting all users. Developers can benefit from seamless Visual Studio integration, detailed documentation, and free online training for quick onboarding.

Popular components such as Data Grid, Scheduler, and PDF Viewer, as well as tools like TileLayout for dashboards, allow you to create applications for any scenario. On top of that, it has an intuitive API, responsive technical support, and cross-compatibility across different platforms so that you can create fast, visually attractive, and reliable web applications quickly and easily.

Key Features of Telerik UI for ASP.NET :

- 110+ Fully Customizable Components:** Build apps with Grids, Charts, Schedulers, Editors, and more to suit your unique requirements.
- Theme Builder & Design Kits:** Easily customize designs and collaborate with designers using pre-built Figma UI kits for Default, Bootstrap, and Material themes.
- Telerik REPL:** A browser-based tool to test, edit, and share code or experiment with UI components effortlessly.
- Document Processing Libraries:** Work with PDFs, Word documents, Excel spreadsheets, and more without third-

party software.

- 5. **Accessibility & Inclusivity:** Full compliance with WCAG, Section 508, WAI-ARIA standards, and RTL and keyboard navigation support.
- 6. **Cross-Platform Support:** Develop Windows, macOS, and Linux applications with compatibility across multiple .NET versions.
- 7. **Intuitive Development Tools:** Extensions for Visual Studio and VS Code, along with detailed documentation, code samples, and demos.
- 8. **Popular UI Components:** Includes the Data Grid with 100+ features, Scheduler for event management, Chart components for data visualization, and PDF Viewer for document interaction.
