

IDM UltraFTP v23.0.0.36 for Win x86 & x64 + Portable Edition + Patcher

2025-04-14 15:19:25 label 我要反馈 下载页面

IDM UltraFTP is considered to be a private as well as a standalone client of FTP we just created upon the framework of the additional program of IDM for the users and developers just like the ultra-compare and ultra-edit. It is designed with maximum efficiency and can perform in the user's mind. It provides complete support of the theme, support of the station, and an Explorer port, with the process of dragging and dropping the transport and a lot more to be mentioned. It can incorporate with the ultra-edit as well as UESTudio, Ultra compare and even the ultra-finder in order to supply a seamless publishing as well as editing expertise for the user and developer on the local as well as remote systems.

can support the protocols of the FTP, SFTP, and, last but not least, FTPS. If the job the user desires to do is crucial, mission-critical, or the resources that the user needs to encourage the loved ones or the company's center, then the user has to think about the commercially supported alternative. The investment is very safe and just a second to the investment in the group. There is no plugin, no library for the music, no explanation, and no joking around with whatever they can place on the user's hard disk.

Key Features of IDM UltraFTP :

1. The parallel as well as their credit transfer in order to optimize the process of uploading, downloading the times and so on.
2. There is support for the FTP, SFTP, and FTPS formats for the users and developers.
3. It can provide sessions that are tabbed.
4. It can split the local as well as the remote views.
5. Dragging as well as dropping of the transfers is possible.
6. Syncing the local as well as the remote folders is possible.
7. Use the predefined rules of the sync to create one of your own.
8. Customizing the action profile as well as syncing.
9. Setting the server time, the skew, and the second tolerance for the syncing process.
10. Exporting the account of the FTP in the formats of CSV as well as INI.
11. Defining per account basis right under the transfer tab for each account separately.
12. Configuring in order to prompt, skip, and overwrite based on the defined conditions.
