Speed up your database operations by up to 95% with easy-to-use and customizable solutions for Entity Framework (EF) Core and EF6. If you've ever been frustrated by how long it takes to save or update data, is here to change that. Whether you're handling a few records or millions, our extensions drastically improve performance by optimizing common tasks like inserts, updates, and deletes. You can see how much time you could save with proven online benchmarks.

For example, compared to the standard SaveChanges method, you can insert data up to 14 times faster, update it four times faster, and delete it three times faster. This means your applications will run more smoothly, and your clients will have a much better experience. And the best part? It's incredibly easy to implement—add the word "Bulk" to your code, and you're ready to go. Plus, you'll have over 100 customization options to tweak performance exactly how you need.

ZZZ Projects Entity Framework Extensions go beyond just saving time. They also help you handle large datasets efficiently, overcoming limitations in EF's standard methods. You can perform complex queries, like bulk inserts, updates, and deletes, without loading the entire dataset into memory. This speeds things up reduces memory usage and makes your applications run more efficiently.
