X-DBGrid Component v7.4 (03 Sep 2020) for D10.4 Sydney

2026-10-07 08:26:59

X-DB Grid Part is this correct to be a very highly effective functional extension of the component standard of TDBGrid presents for the users and developers. The component of the TXDBGrid has the ability to appear unique and also Implement a lot of added feature just like the fixed columns, windows themes, and finally the custom-designed and a lot of other versions of the gradient drawing, proportional scrolling for the data set even for the process of filtered and expandable columns, check boxes, hot buttons, drawing into the cells, sorting the mark as well as multi-column sorting process, increasing the lookup list, recording the information, calculator, calendar, saving as well as loading the column design, Rose support, Auto number as well as auto select column, and last but not least the extending of the column and other more. TXDBGrid on the other hand has the ability to provide Auto updated quick number to the user, the arrangement for the auto change sorting process and even the normal descendants of the data set, four types of incorporated footers and counts, search panel word wide, the protracted column for the lookup, and finally the auto filter listing for each and every column separately. TXDBGrid is very compatible along with the standard of the TDBGrid and has a lot all features and it can be utilized as a replacement without even having to lose the existing values of it. TXDBGrid consists of the column editor as well as the designer which has the ability to fully support the new column properties for the users. It should be added that it has the ability to represent the Standalone editor of the color and perform the same functionality for the editor as well as the selected column in the component of TXDBGrid.

X-DBGrid Component Great Features:

It has the following advantages that are stated as below such as:

- It has the ability to hint and tooltips for the data cells.
