What is Clean White Background Presets

"Clean White Background Presets" likely refers to a set of pre-configured settings or filters used in image editing or photography software to create a clean and consistent white background for photos. These presets can be especially useful when you want to remove distractions and create a professional-looking backdrop for product photography, portraits, or other visual content.

These presets typically work by adjusting various parameters such as exposure, contrast, brightness, and white balance to ensure that the background appears pure white and evenly lit. They can save time and effort compared to manually editing each photo to achieve the desired effect.
