HOW TO INSTALL TO MOBILE:

STEP 1: Unzip the files

The first thing you will need to do is unzip the folder of presets that you downloaded. You can easily do this on a computer. On a PC, just right-click on the zipped folder and choose "Extract All" from the menu of options. On a Mac, just double-click the file and Mac's unzipping utility does the rest.

STEP 2: Save the Preset

If you unzipped the presets on your computer, you will need to save the preset files to your favorite cloud storage option, so you can access them on your mobile phone. You will also need to be able to allow access to those files on your phone through that same cloud storage app.

If you unzipped the preset download on your phone, you can skip this step. Make sure you know where the unzipped files are located on your phone or device.

STEP 3: Open the Lightroom Mobile cc app

STEP 4: add the DNG/ Preset files

To add a preset, click on the (...) Settings option in the top-right corner of the app.

Choose the Add Photos option.

On the next screen, choose the location you will be pulling your DNG/Preset files from. If you have saved them to your phone, choose "From Camera Roll". If you have saved them to a cloud storage option, choose "From Files".

This step is really easy. Just open your free Lightroom app. Once it's open, you can add the DNG/Preset files (next step).

STEP 5: Create Lightroom Preset from the DNG files

Click on one of the newly imported files, then click on the three dots inside a circle in the upper right-hand corner of the screen. From there, choose "Create Preset" from the menu that appears.
