Individually, these pedals are available for purchase and maintain backward compatibility with the previous Stomp Ware product line (excluding the deprecated RTAS format). The Stomp Board and its corresponding pedals are compatible with AAX, AU, VST, and VST3 formats, catering to Windows and macOS users.

Effortlessly load and arrange the 8 effect pedals in any desired order through a simple drag-and-drop interface. The host application boasts a meticulously tuned Gate, 4 integrated Amps for an instant rocking experience, a tilt-style Tone control for global EQ adjustments, and an inbuilt spring reverb. Additionally, it features input and output knobs, along with a gain staging metering view for precise control. Elevate your guitar sound with the versatility and convenience of the Stomp Board.

- The Free Fuzz pedal is a homage to a rare and highly sought-after silicon transistor fuzz pedal that gained fame through players like Jimi Hendrix in the late '60s. It offers a diverse array of creamy and dynamic fuzz effects, delivering almost limitless sustain for both soloing and robust rhythms.
- The Green Screamer is a vintage overdrive pedal designed to generate a dynamic spectrum of smooth and warm overdrive tones reminiscent of classic tube amplifiers.
- As for the Mind Bender, it's a dual-mode vibrato/chorus pedal employing a Bucket Brigade Delay (BBD) circuit. This pedal produces a broad spectrum of warm, lush effects, including vibrato, chorus, and the sounds of a rotating speaker.
- The Opto Stomp is a transparent optical compressor, offering a broad spectrum of soft-knee compression effects reminiscent of the top-tier vintage compressors crafted in the 1960s.
- Introducing the Sonic Stomp, a compact version of our widely-loved Sonic Maximizer. Meticulously designed to replicate the sonic enhancements of our rack-mounted 482i Sonic Maximizer, the Sonic Stomp adds clarity, definition, and punch to any instrument.
- Enter the Soul Vibe, a vintage vibe and rotary speaker simulator celebrated for its chewy phase-like textures that gained popularity in the late '60s and '70s. Iconic players such as Jimi Hendrix, David Gilmour, and Robin Trower embraced its unique sound.
- The Tremor is a dual-mode Tremolo/Auto-Pan featuring an optical circuit to produce a diverse range of warm pulsating sounds reminiscent of the vintage "vibrato" effect in tube amps. This plug-in offers the convenience of two independent effects, switchable via footswitches, while maintaining the original hardware aesthetic. Users can seamlessly toggle between a Tremolo and Auto-Pan effect for added flexibility.
- Inspired by the discontinued DM-2 Delay, the Two Timer captures the essence of its warm, haunting reverb and tape-like echoes. This pedal provides two independent delay times, which can be switched via the Time1/Time2 mode

footswitch.

- In its software version, the Time1/Time2 switch label transforms into MONO (Time1 delay) and STEREO (Time1 for the left delay, Time2 for the right delay). This setup allows for both mono and stereo vintage delay options, creating a captivating range of spatial effects.

- Stomp Board functionality as both a host and standalone application
- Integrated Amp Simulator featuring four distinct amps
- Precision-tailored Gate designed specifically for guitarists
- Tilt-style global EQ for nuanced tonal control
- Built-in Reverb for added spatial depth
- Eight guitar effect pedals are accessible within Stomp Board and also available as individual plugins.

What is BBE Sound Stomp Board?

BBE Sound Stomp Board is a virtual pedalboard software plugin designed to emulate the sound and functionality of a physical guitar pedalboard. Developed by BBE Sound, it offers a collection of virtual guitar pedals that can be used to shape and enhance the tone of electric guitar and bass signals.
