HashiCorp Boundary v0.20.1 Enterprise Edition for Win & Linux & macOS

2026-01-25 15:09:03

HashiCorp Boundary is a modern privileged access management solution for securing user access in dynamic cloud environments. It ensures authentication and authorization through trusted identity providers, enabling single sign-on and role-based permissions for users on virtual machines, Kubernetes, and databases. Emphasizing least privileged access mitigates breach risks with just-in-time credentials, enabling password-less access without exposing sensitive information.

The platform enhances productivity by automating onboarding processes for new infrastructure resources and streamlining developer workflows. It improves efficiency by minimizing the need for bastion hosts and VPNs, allowing organizations to scale dynamically across clouds and systems. Aligned with zero-trust security principles, **HashiCorp Boundary** authenticates users, authorizes access, automates service onboarding, and provides auditable records for compliance.

As part of HashiCorp's suite, complements tools like Vault for securing secrets and Consul for secure service connectivity. Integrated with trusted identity providers such as Okta and Azure Active Directory, Boundary serves as a comprehensive identity-based security toolkit, whether managed by HashiCorp or self-deployed, ensuring a robust solution for secure remote user access management in diverse IT environments.

Key Features of **HashiCorp Boundary** :

1. Identity-driven controls for modern privileged access management
2. Authentication and authorization through trusted identity providers
3. Single sign-on access and role-based permissions for users
4. Connectivity to dynamic infrastructures like virtual machines, Kubernetes, and databases
5. Least privileged access to networks, permissions, and credentials
6. Risk reduction through trusted identities and just-in-time credentials
7. Password-less access without exposing sensitive information
8. Automated onboarding for new or modified infrastructure resources

Applications Tools

9. Streamlined developer workflows and reduced manual access management
10. Elimination or reduction of bastion hosts and VPNs for improved efficiency
11. Dynamic access management scaling across clouds, users, and systems
12. Alignment with zero-trust security principles
13. Auditable records for compliance and security monitoring
14. Integration with HashiCorp's suite, including Vault for securing secrets and Consul for service connectivity
15. Compatibility with trusted identity providers like Okta, Ping, and Azure Active Directory
16. Comprehensive identity-based security toolkit for remote user access management
