TMS FMX UI Pack v3.7.9.0 (27 Oct 2023) for Delphi & CB XE7-11 Alexandria Full Source

2025-01-01 22:43:35

It is a set of highly configurable as well as styleable elements which are used for the cross-platform fire monkey computer software as well as development. It is an architecture based course which is based on initial fire monkey, and it is very difficult to extend as well as customize it. Its performance can degrade if the FMX count raises higher. It has a basic fundamental design time for the process of integration and it supports the frame of FMX. On the other hand, FNC is the new architecture that is independent and it was created from nothing but scratch. It is very easily extensive and has many customization options as well as events for all of the users. Because of the faster performance and it consists of graphics that are having high quality. Enhancing the design-time integration is possible and also it has support for multiple frameworks such as WEB, VCL, and last but not least LCL. It has compatibility which is high level. It has a keyboard as well as mouse handling customization for the processes of tabbing, entering, inserting, deleting, as well as key handling. There are various cell types that are available and they can create as well as support the custom cell types for all the users. The pack of TMS FMX UI is a collection of different components for platforms in various versions of Delphi.
