Aescripts Smart Collect for Premiere Pro v1.0.1:

Smart Collect streamlines asset management by automatically collecting and relinking all assets used in the selected timeline and nested timelines with one click. It copies only the necessary files, organizes them in a mirrored folder structure, and saves a copy of the project with relinked clips. Unlike Premiere Pro's native project manager, Smart Collect handles nested sequences effortlessly, saving time and reducing the risk of missing sequences.

Features:

- Copies only assets used in the selected timeline.
- Saves and relinks project clips to the copied assets.
- Organizes copied assets in a mirrored folder structure.
- Allows project downsizing by deleting unused assets.

Limitations:

- After Effects projects: Smart Collect generates a log file for manual backup and relinking.
- Graphic essential templates: These files are copied but not relinked; a log file is provided for manual relinking.
