KS DB Merge Tools for SQLite is a user-friendly application for comparing and merging SQLite database files. With its intuitive two-panel interface, akin to renowned text-diff tools, this software empowers users to analyze database object definitions and data differences. It facilitates the generation and execution of SQL scripts for synchronizing these changes.

This tool efficiently examines SQLite databases, enabling users to not only delve into their contents but also to identify disparities and employ filters to uncover alterations in tables, indexes, triggers, and views.

KS DB Merge Tools for SQLite Pro Great Features:

In KS DB Merge Tools for SQLite, you can easily use SQLite databases. The appets you open and examine two databases side by side, providing a clear view of their table definitions, indexes, triggers, views, and pragmas in separate panels. It's also possible to open new application instances to load additional databases.

This tool comprehensively compares database schema and data within multiple tables and views. You can review all modifications across database fields or configure filters to focus on new elements or changes within tables and views. In essence, you can apply filters to highlight alterations or additions, making it easy to synchronize changes between databases.

KS DB Merge Tools for SQLite effectively highlights discrepancies between tables, allowing you to compare columns, specify desired column orders, and sync table definition changes.

Furthermore, the software enables you to run SQL queries, allowing you to handle key and data column mapping. It also offers choices for basic or customized key column mapping.

Beyond its comparison and viewing features, KS DB Merge Tools for SQLite empowers you to export data to Microsoft Excel. In other words, you can create Excel reports for object lists, data differences, and query result variations.
